Introduction

Congratulations on choosing to buy a Tevion® product. By doing so you now have the assurance and peace of mind that comes with purchasing a product made by one of Europe's leading manufacturers.

All products brought to you by Tevion® are manufactured to the highest standards of performance and safety, and, as part of our philosophy of customer service and satisfaction, are backed by our comprehensive 3 Year Warranty. Please fill in and return the Warranty Card to the address provided. We hope you will enjoy using your purchase for many years to come.

Overview

LCD-TV

Front

1. TFT screen
2. Loudspeakers
3. On/off light with integrated infra-red sensor
   - On/off light: the blue light will come on when the device is in stand-by mode. It will go off if the device is switched on.
   - Infra-red sensor: receiving area for infra-red signals from the remote control.
Operating controls on the side

1. **STANDBY**: to switch the LCD-TV off temporarily.

2. **TV/AV**: to select the input signal: **TV** (antenna, **EXT–1**, **EXT–2**, **EXT–1 S**, **BAV**, **S–Video**, **HDMI 1**, **HDMI 2**, **YPbPr**, **PC**).

3. **MENU**: with this key you can display the screen menu to make adjustments to your equipment.

4. **+ P/CH –**: you can switch TV channel using these keys.

5. **+ P/CH –**: you can regulate the volume of your equipment with these keys.
1. Aerial – connection for co-axial aerial
2. VIDEO-input (yellow) and AUDIO-inputs (red/white): to connect a device using an RCA cable.
3. Headphone connection: to connect headphones with a 3.5 mm TRS stereo connector.
5. L - R Audio output: to connect devices with Audio input
6. L - R Audio input: to connect devices with Component Audio output.
8. SCART 1: 1st SCART connecting
9. SCART 2: 2nd SCART connection
10. VGA-INPUT: to connect a PC.
11. HDMI-1; HDMI-2 inputs: to connect a device with a HDMI output
12. Common Interface: insert slot for the use of pay-TV cards
13. SUB OUT: output to connect an external active sub woofer
14. SPDIF: digital audio output (optical) to connect devices with optical audio input
15. Power in: to connect the supplied power cable.
16. On/off switch: to put the device into stand-by mode and switch it off again.
1. Red key opens SOUND menu
2. Green key opens PICTURE menu
3. : Display time/Video text open sub-page
4. : Switch video text on and off
5. : select picture format;
6. : video text: Mix (transparent picture); opens a second picture in the picture (PIP)
7. Digit keys in the TV mode: channel selection; in video text mode: page selection
8. P<->P SWAP: set previous TV channel
9. V + / - : to increase (+) or decrease (-) volume.
10. Mute: Switch volume off
11. Channel selection keys P + / : Select the following (+) or the previous (-) channel in TV mode. Select the following (+) or the previous (-) channel in video text mode.
12. I-II: select sound mode
13. INFO: to display information, such as current channel number and picture format
14. TV/DTV: select TV or DTV operation
15. M: open menu.
16. STANDBY: to switch the LCD-TV off temporarily.
17. Yellow key opens FUNCTION menu
18. Blue key opens INSTALLATION menu
19. : video text: stop page; : select the PIP position
20. video text: hidden searching; opens a second picture at the picture (PAP)
21. : video text: hidden text/switching from TV mode to PC mode
22. GUIDE: call up EPG ; video text: call up index page
23. */--: enter a number with two digits; EXIT: close menu.
24. PP: select PICTURE mode
25. AV/SOURCE: select input signal from connected devices
26. OK: in certain menus to confirm selection
27. Direction keys
General Information

Read these instructions carefully under all circumstances and follow all the instructions listed. You will guarantee the reliable operation and a long life expectancy of your LCD TV in this way. Always keep these instructions at hand, close to your LCD TV. In the event that you transfer ownership of this LCD TV, please provide these instructions to the new owner.

Purpose of use

- This device serves to receive and transmit television channels. The different connection possibilities will enable an additional expansion of the sources of reception and transmission (Receiver, DVD-Player, DVD-Recorder, Video Recorder etc.).
- This device is only suitable for using in dry, internal rooms.
- This device is not suitable as a data screen for office use.
- This device is intended for personal use only. It is not intended for commercial use in a heavy industry environment. Use under extreme environmental conditions can result in damage to your device.

HD ready

Your LCD-TV is equipped with the 'HD ready' feature. This means that it can display high resolution television programmes (HDTV) in principle. It is the prerequisite that an HDTV signal is sent to the LCD TV by an external set-top box (HD-STB).

Included in the box

Check that nothing is missing from the packaging and inform us of any missing parts within 14 days after purchase. The delivery of the LCD-TV you have purchased includes:

1. LCD-TV
2. Connection cable
3. Remote control incl. 2 batteries type R03 (AAA) 1,5V
4. Set for wall mounting (see Wall mounting).
5. Documentation
Safety instruction

Safety

• Do not allow children to play unattended on electrical equipment. Children may not always correctly recognize danger.
• Keep the packing materials, such as foil away from children. The danger of suffocation could arise in the case of misuse.
• Never open the housing of the TFT display (electric shock, short-circuit and the danger of fire)!
• Do not insert any objects through the slots and openings into the inside of the TFT (electrical shock, short-circuit and the danger of fire)!
• The remote control has a class 1m infrared diode. Do not examine the LED with optical instruments!
• Slots and openings in the TFT display are for ventilation purpose. Do not cover these openings, as otherwise this may lead to overheating (overheating, danger of fire)!
• Never exert pressure on the display. This could damage the display.
• An injury hazard exists when the display breaks. Wear protective gloves to pack the broken parts and send them into your service center for proper disposal. Then wash your hands with soap, because it is possible for chemicals to escape.
• Do not touch the display with your fingers or with sharp objects to avoid damage.
• Please proceed as outlined in the service center section:
  – if the AC cable overheats or is damaged
  – if liquid has gotten into the display
  – if the device does not work properly
  – if the device is dropped or the housing damaged

Point of use

• In the first hours of operation, new devices may emit a typical, unavoidable but completely harmless smell, which will decline increasingly in the course of time.
• We recommend you to ventilate the room regularly, in order to counteract the formation of the smell.
• Keep your LCD TV and all units connected to it away from moisture and avoid dust, heat and direct sunlight. Failure to observe these instructions can lead to malfunctions or damage to the LCD TV.
• Do not operate your device in the open air, because external influences, such as rain, snow, etc. could damage the device.
• Do not subject the device to drops or splashes of water and do not place any vessels filled with water, such as vases, on the device. Water penetrating the device can impair its electrical safety.
• Do not place any open sources of fire (candles or similar objects) on the device.
• Leave sufficiently large clearances to allow for ventilation, particularly when mounting in a cupboard or alcove. Maintain a minimum clearance of 10 cm around the device for sufficient ventilation.
• Place and operate all units on a stable, level and vibration-free surface in order to avoid the LCD TV from falling.
• Avoid dazzle, reflections, extreme light/dark contrast in order to save your eyes and ensure a pleasant viewing experience.
• The optimum viewing distance is 5 times the screen diagonal.
Repair

- Leave all repairs of your LCD TV to authorized and qualified personnel only.
- Should a repair be necessary, please contact one of our authorized service centers.

Intended Environment

- The device can be operated at an ambient temperature of between 5° C to 35° C and at a relative humidity between 20% and 85% (without condensation).
- When switched off, the LCD-TV can be stored most reliably between -20° C to +60° C.
- Provide an interval of at least one meter from high-frequency and magnetic sources of interference (television sets, loudspeakers, mobile telephones, etc.) in order to avoid malfunctions.
- After transporting your LCD TV please wait until it has assumed the ambient temperature before connecting and switching it on.
- Large variations in temperature and humidity can cause condensation to occur inside the LCD-TV, which may cause an electrical short circuit.
- Disconnect the power plug from the power socket and the aerial from the aerial connection during storms or if the device is not being used for a long time.

Power Supply

Please pay attention: Parts of the device are still live, even if the mains switch is switched off. Pull the mains plug out of the socket, to interrupt the power supply to your LCD TV completely.

- Operate your TFT display mains (power supply) only on grounded sockets with 230 V ~ 50 Hz. If you have doubts about the power supply in the location where the LCD-TV is installed, consult your energy supplier.
- For additional safety we recommend use of an excessive voltage protection device to protect your LCD TV from damage resulting from voltage surges or lightning.
- The power socket must be in the vicinity of your LCD TV and within reach of the power cables.
If you use an extension cable, please ensure that it complies with the VDE requirements. If necessary consult your electrical equipment supplier.

You should lay the TFT Display cables in a manner that no one can trip or step on it.

To avoid damage of cable do not place any objects or furniture on the cable.

**Standards/electro-magnetic compatibility**

Your display fulfills the requirements for electro-magnetic compatibility and electrical safety specified in the following standards:

<table>
<thead>
<tr>
<th>Standards/electro-magnetic compatibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN 55013</td>
</tr>
<tr>
<td>EN 55020</td>
</tr>
<tr>
<td>EN 60065</td>
</tr>
<tr>
<td>EN 61000-3-2</td>
</tr>
<tr>
<td>EN 61000-3-3</td>
</tr>
</tbody>
</table>

**Batteries and Proper Treatment**

Batteries may contain combustible materials. By misuse, this may cause battery leakage, heat, explosion or ignition, bringing about injury or damage to the device.
Please observe strictly the following matters:

- Keep children away from batteries. If by any chance, the batteries are swallowed, consult a doctor immediately.
- Do not charge batteries (except rechargeable batteries).
- Do not forcibly discharge batteries.
- Do not short-circuit batteries.
- Do not heat or dispose off in fire.
- Do not disassemble or deform batteries. Your hands and fingers may be injured, or the liquid of the battery may get into your eyes or adhere to your skin. If this happens, rinse with a large quantity of water immediately and consult a doctor.
- Do not expose batteries to strong impact by dropping or throwing the batteries.
- Do not reverse the positive (+) and negative (-) terminals to avoid short-circuit.
- Do not mix used and new or different types of batteries together.
- Remove promptly the used batteries from the device.
- Remove the batteries from your device if it is not to be used for a longer period.
- Clean the battery and device contacts, if necessary, before inserting batteries.
- Replace all batteries with new batteries of the same type at the same time.
Setting Up

NOTE: Read the Safety Information Chapter under all circumstances before bringing the device into operation.

Unpacking
1. Have someone help you when unpacking the equipment.
2. Do not carry the equipment alone, otherwise it could fall or cause personal injury.
3. Open the box very carefully to prevent the equipment from being damaged. Damage can occur if a knife with a long blade is used to open the box.
4. There are various small parts in the packaging (batteries, screws, etc.). Keep these out of the reach of children. There is a risk of swallowing the parts.
5. Please keep the packaging material well and use it exclusively to transport the television.

Putting the batteries into the remote control
1. Remove the small cover on the battery compartment on the back of the remote control.
2. Install two AAA size, type R03 batteries according to the correct polarity (marked in the battery compartment).
3. Close the battery compartment.

ATTENTION! Remove the batteries from the remote, if the device will not be used for a longer period. The remote could be damaged by leaking batteries.
Connecting an antenna

Connect the aerial connection and the LCD-TV by means of a double screened aerial cable (not supplied) when connecting the device to the room aerial or cable system.

Connecting the power supply

Insert the plug on the supplied power cable into the connecting bush (1) (220-240 V ~ 50 Hz) on the device and insert the other end into an easily accessible 230 V ~ 50 Hz power socket.

Turning the LCD TV on and off

1. Press the on/off switch (2) on the back of the device. The stand-by mode will be activated and a blue light on the front will come on.
2. You can switch on the device by pressing a digit key on the remote control or a P/CH channel selection key on the remote control or on the device itself. The light on the front will go out.
3. You can put the device back into stand-by mode with the stand-by key on the remote control or with the stand-by key on the right side of the device.
4. Press the on/off switch on the back of the device again to switch the device off completely.
First Time Installation

The IDTV Menu will appear when you switch your device on for the first time. You will be greeted in different languages and requested to select the language of the IDTV Menu.

You will be able to move upwards or downwards in the Menu by means of the ⬆️ ⬇️ directional buttons. Press the OK button to confirm your selection. You will receive information about using the IDTV Menu in the Help Menu; press the INFO button to call up the Help Menu. You will leave the Help Menu by pressing the INFO button again.

Searching for digital channels

The initial installation will start after you have confirmed the language with OK.

Select the country required with the ⭆️ direction buttons and press OK. The digital transmitter, the query concerning the automatic search process of the transmitter, will appear.

Click on Yes with the ⭆️ direction buttons and press OK to start the digital search process of the transmitter.

Click on No with the ⭆️ direction buttons and press OK to stop the process. IDTV will search through the UHF channels 21 to 68 and for terrestrial digital TV channels automatically.
The names of the channels found will be displayed. This process will last about five minutes. You will be able to press the M button at any time, to stop the search. The following Menu will be displayed during the automatic search process of the transmitter:

![Automatic search](image)

You will be requested to start the search for analogue channels after the conclusion of the digital search process of the transmitter.

Click on No with the ▼ direction buttons and press OK to stop the process.

Click on Yes with the ▲ direction buttons and press OK to start the analogue search process of the transmitter.

The TV device will switch to the analogue TV mode.
Seeking analogue channels

- If you wish to change the pre-set country setting, set the required country with the directional key. The country setting has an effect on the sequence in which channels are stored.

- Then select if necessary the Language message with the directional key and choose the required language with the directional keys.

- If you wish to change the pre-set for the video text language, use the directional key to select the message TXT Language (Language for teletext) and use the directional keys to select the required language region Westen, Ost (East), Türk/Gre (Turkish/Greek), Kyrrilisch or Arabisch.

- Then confirm the message "CHECK ANTENNA CABLE" by pressing the OK key or pressing the red key.

- You can cancel this process by pressing the blue key.

Automatic channel seeking

Automatic channel seeking will now commence. This takes a few minutes.

You can cancel this process with the blue key.

The channels are stored in a country-specific sequence in the channel locations. It is possible to store a maximum of 100 channels.

After automatic storage of channels is complete, the programme table will be displayed. If this table is not modified further, it will close after a few minutes. The channel on channel location 1 will appear.
Basic Functions

Switching between DVBT and analogue reception
You will be able to switch between terrestrial digital reception and analogue reception at any time, while a television programme is being displayed, with the TV/DTV button.

Having information displayed
The information box will inform you about the channel selected and the programme showing. The name of the channel will be displayed together with the list number of the channel; the strength of the signal will also be shown. The programme currently showing and the next programme beginning will be displayed, together with their starting and finishing times.

- Press the INFO button, to have the information box displayed. The box will be faded out if you press the INFO button again.
- You will obtain the same information when switching to a different programme.

Programme data will not be transmitted by all channels. ‘No data available’ will be displayed in the information box if the names and times of the programmes are not transmitted.

Channel Search
- You can select a channel by pressing the P key on the remote control (or P/CH on the device) or by selecting the channel directly using a digit key.
- For a number with two digits first press the -/- key.
- You can select the most recent displayed channel with the P<P/SWAP key.
Sound Settings

- You can increase or decrease the volume with the volume keys + V - on the remote control or + - on the device.
- You can switch off the sound completely and switch it on again with the key (Switch sound off).
- You can choose between mono- and stereo reproduction, Dual I and Dual II, with the l-II key. Dual I and Dual II can only be reproduced if the current broadcast supports the DUAL mode (e.g. with bilingual broadcasts).

Setting the Picture

Zoom mode (+ key)

Press on the key to switch between the following picture formats.

- **Auto**: the transmitted format is automatically set to the input signal.
- **16:9**: a picture in 16:9-format will be expanded to full screen size.
- **4:3**: for undistorted display of the picture in 4:3-format.
- **Panoramic**: the picture is stretched on the left and right sides to fill up the screen. In this case the upper and/or lower edges are somewhat cut off.
- **14:9 Zoom**: a picture in 14:9-format (“Letterbox”) will be expanded to the upper and lower edges of the screen.
- **Cinema**: a picture in 16:9-format will be expanded to full screen size.
• **Subtitle:** As with the "Cinema" setting. The picture is only shifted up, so that any subtitles or running text become visible.  

• **Zoom:** the picture is automatically expanded to full picture width.

**Zoom in PC mode**

• You can make use of the 4:3 and 16:9 formats in PC mode.

**Other picture settings**

• You can pause and again release the picture with the OK key.
• You can select the picture mode with the PP ("Personal Preferences") key: Natural, Cinema, Dynamic.

**Displaying information**

• Press on the INFO key to display the following current settings:  
  – Channel location and channel name;  
  – Volume setting (Mono of Stereo);  
  – Picture setting.  
• You will receive the same information when you switch over to another channel.  
• You can display the time in TV mode by pressing the ⏰ key (Time/Sub-page videotext).
Select external device

- You can select the IN connections on the connected devices with the **AV/SOURCE** key.

  Note that the source (the connected device) will only be recognised if this source is highlighted in the **SOURCE** menu when switching through with the **AV/SOURCE** key.

- **P–DTV**: TV function (aerial signal) / DVB-T function
- **EXT - 1**: device on SCART 1 input
- **EXT - 2**: device on SCART 2-input
- **EXT-2 S**: device with S-Video output on SCART 2 connection
- **BAV**: device on yellow/white/red RCA inputs
- **S-VIDEO**: device on S-Video connection
- **HDMI-1**: HDMI input 1
- **HDMI-2**: HDMI input 2
- **YPbPr**: device on Component video and audio inputs
- **PC**: device on PC input
Video text

Your LCD-TV supports 1000 pages of Teletext. This means that the device does not need to search following input of one of these 1000 pages, but will immediately display the page in question.

Video text is a free service that is broadcast by the majority of television stations and offers current information in relation to news, the weather, television programmes, share prices, subtitles and other subjects. Your LCD TV offers many useful functions for operating Video text and multi-page text, storing sub-pages or fast navigation.

To operate video text

1. Select a TV station on which video text is being transmitted.
2. Press on the \[\text{key}\] to display the basic/index page of the video text.
3. The TV picture will be displayed on the left after you have pressed the \[\text{key}\] again.
4. By pressing the \[\text{key}\] again, you will switch over again to TV mode.
5. Press the TV key to return to TV mode.

Select video text pages

Number keys

- Enter the video text page required directly as three-digit number with the number keys.
- The page number selected will be displayed in the upper left corner of the screen. The video text counter will search until the page number selected has been found.

Channel selection keys

- You can scroll forwards and backwards through the video text pages with the channel selection keys.
Colour buttons
• If text is displayed in colour at the bottom of the screen, you can select the associated content immediately by pressing the associated **RED**, **GREEN**, **YELLOW** or **BLUE** keys.

Subpages
Some video text pages contain sub-pages. For example, **1/3** will be displayed at the lower edge of the screen. The sub-pages will be faded in successively at intervals of approx. 30 seconds.

You will also be able to call up the sub-pages yourself by pressing the **subpage** button. A four-digit entry field will appear, into which you will be able to enter the number of a sub-page (e.g. 0002). You can scroll through the sub-pages with the directional keys ⬅️ ➔.

Useful features for video text

Combination of video text and TV picture
• Press the **key** to display Teletext transparently (the TV picture is visible in the background).

INDEX
• Press this button to select the index page that displays the list of Teletext contents.

STOP
The video text page that you have selected may contain more information than will fit on the screen. In this case the information will be sub-divided across several sub-pages. The sub-pages will be scrolled through with regular pauses in between.

• Press the **STOP** key to prevent pages from changing automatically. The **STOP** symbol will be displayed in the top left corner of the screen and the automatic switching over of pages will be interrupted.

• Press the **STOP** key again to resume automatic changing of pages.
Suppress TT Search

If you press the $\text{ Suppress TT Search}$ key in video text mode, the video text display will move to the background. With this you can bridge waiting times until the required page displays.

- Select the required page number in the video text mode.
- Press on the $\text{ Suppress TT Search}$ key to switch to TV mode while waiting for the video text page. A field will appear in the top left corner with the required page number or the $\text{ Suppress TT Search}$ symbol while searching continues.
- The page number will be displayed as soon as the required page is found.
- Press the $\text{ Suppress TT Search}$ key again to display the required page.

Displaying hidden text

- You can display hidden information, such as solutions to riddles, puzzles or quizzes, by pressing the $\text{ Display hidden text}$ key once.
- If you press the $\text{ Display hidden text}$ key again, the answers will be hidden again.

Doubling the size of the page

- This function displays the video text information doubled in size.
- Press the $\text{ Double size}$ button, to enlarge the upper half of the page.
- Press the $\text{ Display hidden text}$ button again, to display the lower half of the page enlarged.
- Pressing the $\text{ Double size}$ button again will return the video text to its normal size.
The IDTV menu

The IDTV Menu (Integrated Digital Television) can only be displayed when you are viewing a terrestrial digital broadcast. You will be able to switch IDTV to the analogue mode with the TV/DTV button (below left on the remote).

- Press the Menu button M; the Menu to the right will appear on the screen:
- You will choose the options from the Main Menu with the \( \uparrow \downarrow \) directional buttons.
- You will choose the options from a Menu with the \( \uparrow \downarrow \leftarrow \rightarrow \) directional buttons.
- You will choose a setting in a sub-menu with the \( \leftarrow \rightarrow \) directional buttons.
- Confirm the selection and store the setting with the OK button.
- Close the Menu or jump back to the previous Menu with the Menu button M.
- Leave the Main Menu with the Exit button.

It will usually be shown which buttons are available to you when operating the respective Menu in the lower menu strip.

Help Menu

You will be able to call up helpful information about the Menu functions with the INFO button in most Menus.
Channel List

The Channel List is where you will organize your channels. You will be able to carry out the following actions in this Menu:

- Navigation through the whole list of channels
- Shift channels *(Move)*
- Delete channels *(Delete)*
- Rename channels *(Edit Name)*
- Block channels *(Lock)*
- Establish favourites *(Favourites)*

* The “Shift” option of the Channel List may not be displayed, according to your selection of a country during the initial installation.

Select Channel List, the first entry in the Main Menu, with the directional buttons.

Then press **OK**, in order to display the Channel List.

**Scrolling through the whole Channel List**

You will select the previous or the next channel with the ▼ ▼ directional buttons.

You will be able to use the red or the green button, to scroll one page up or down.

If you wish to view a particular channel, select it with the ▼ ▼ directional buttons and then press the **OK** button, while the “Selection” entry in the Channel List Menu has been emphasized by the • or • button.
Sorting the channels in the Channel List
Select the channel to be moved with the  ▲ ▼  directional buttons.
Select the "Move" function in the Channel List Menu with the  ◄ ►  directional buttons.
The ‘Move’ function will be displayed next to the OK entry in the lower Menu strip.
Press OK; a dialogue window will open.
Enter the required channel number and press OK. You will be asked whether you wish to exchange the two channels, if a channel position is already occupied.
Select Yes and confirm with OK. The channels will be exchanged and the Channel List will be updated.
Select No and confirm with OK. The channels will retain their positions.

Deleting channels from the Channel List
Select the channel to be deleted with the  ▲ ▼  directional buttons.
Select the “Delete” function in the Channel List Menu with the  ◄ ►  directional buttons.
The “Delete” function will be displayed next to the OK entry in the lower menu strip.
Press OK, in order to delete the selected channel from the Channel List.
The following message will subsequently appear on the screen:
"The selected service will be permanently deleted, and favourite list will be turned off. Are you sure?"
Select the required option with the  ◄ ►  directional buttons.
The selected channel will be deleted if you press the OK button while “Yes” is selected.
The deletion process will be stopped if you select “No”.

Renaming channels
You will select the channel that you wish to rename with the  ▲ ▼  directional buttons.
Select the “Edit Name” function in the Channel List Menu with the  ◄ ►  directional buttons.
The “Edit Name” function will be displayed next to the OK entry in the lower menu strip. You will be able to move the selected channel to the required position in the Channel List with the OK button. The Channel List will be updated.
Now, you will be able to move to the previous or the next signal with the ▲ ▼ directional buttons.
You will now be able to move through the set of symbols (scrolling) with the ▲ ▼ directional buttons.
Confirm the change and update the Channel List with OK.
Press the M button to stop the application; you will store the new name with the OK button.

Blocking channels
You will be able to protect access to particular channels (for the protection of young people, for example) by a password, by means of the channel block. You will have to know the password (password at delivery: 0000; it can be changed in the Settings Menu), in order to block a channel.

- Select the channel to be blocked with the ▲ ▼ directional buttons; then choose the "Lock" option with the ▲ ▼ directional buttons.
- Now press the OK button; a password window will be displayed. The ‘Enter Password’ message will appear.

Establishing favourites
You will be able to establish various channels as favourites; you will be able to have only your favourite channels displayed when scrolling through the channels in this way.

- Select the "Favourites" entry in the lower section of the Channel List Menu, in order to establish a favourite channel.
- Now, press the OK button; the 'Process Favourite List' Menu will be displayed on the screen.

You will be able to organize your favourite channels into the following lists: List 1, List 2, List 3, List 4 or List 5.
You will be able to allocate your favourite channels to different categories (e.g. sport, music, etc.) by using five different lists. You will also be able to release only the channels from the selected list for scrolling through, by activating the number of the Favourite List in the Favourites Mode sub-menu of the Configuration Menu.
You will be able to enter a channel in a Favourite List as follows:

- Select the channel that you wish to enter into a Favourite List with the ▲ ▼ directional buttons.
- Select a list number with the ▲ ▼ buttons.
• The selected channel will be added to the selected list by pressing the OK button.
• A symbol, indicating the Favourite List in which the channel is located, will be displayed in the case of each channel.

Removing a channel from a Favourite List
• Select the channel that you wish to remove from the Favourite List.
• Select the list number from which the channel should be removed; then press the OK button. The symbol indicating the position of the channel in the list will disappear from the Menu.
• Pay attention to the fact that a channel may have been added to several Favourite Lists.

Navigating through the favourite channels with the blue button
You will be able to navigate through the lists of favourite channels by pressing the blue button. You will move sequentially right to the top in each list at each press on the blue button.
You will be able to scroll through the list of favourite channels in the respective list with the P+ or P- buttons while a Channels List is selected.
You will have to activate the Favourite Mode in the Settings Menu, in order to be able to use this function.
## Installation Menu

<table>
<thead>
<tr>
<th>Menu Point</th>
<th>Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Automatic Search</strong></td>
<td>The automatic search process of the transmitter will be started by pressing the <strong>OK</strong> button while the <strong>Automatic Search</strong> entry is selected. The following message will appear on the screen: <strong>Please check the antenna connection. Do you want to start automatic search? Your previous channel list will be replaced.</strong> Select &quot;<strong>Yes</strong>&quot; or &quot;<strong>No</strong>&quot; with the ↓ ↑ directional buttons, then press <strong>OK</strong> to confirm it. The search process of the transmitter will be started if you have selected “<strong>Yes</strong>”.</td>
</tr>
<tr>
<td><strong>Manual Search</strong></td>
<td>The multiplex number for searching for channels will be entered manually in the case of the manual search. The signal strength, the signal quality and the network name will be displayed in the lower area of the screen in the case of each valid channel number. Channels already existing in the Channel List will not be stored again, both in the case of the manual search and in that of the automatic search, so that no unnecessary duplicates will arise. The manual search will be started by pressing <strong>OK</strong> while the <strong>manual Search</strong> entry is selected.</td>
</tr>
<tr>
<td><strong>First Time Installation</strong></td>
<td>Select the <strong>First Time Installation</strong> entry and press <strong>OK</strong> if you wish to recreate the <strong>factory setting</strong>. The existing Channel List will be deleted, if you confirm the following question concerning whether you really want to overwrite the current settings with yes. The search process of the transmitter will be started automatically, as if you had started the device for the first time, after the recreation of the factory setting. See the Chapter „First Time Installation”, on Page 18.</td>
</tr>
</tbody>
</table>
Configuration Menu

You will be able to have the settings for each channel displayed and change them if necessary in this Menu.

No new Software was found.” will be displayed on the screen after the search has been completed, if no new software is available. The version number of the software found will be displayed otherwise.</td>
</tr>
</tbody>
</table>
Menu Timers

You will be able to establish up to five different timer events; these events will be displayed in the Channel Timer Menu. The number of the event, the channel to be selected, starting time, ending time, date and mode will be displayed here. In addition, it will be shown whether an event is active (and will be performed) or not.

Select the respective mode with the ▲ ▼ directional buttons and press OK, to fix an event; the Time Entry Window will be displayed. You will be able to make six settings here: type of channel, channel name, starting time, ending time, date and mode (frequency) here.

<table>
<thead>
<tr>
<th>Menu point</th>
<th>Settings</th>
</tr>
</thead>
</table>
| **Type** | TV  
Text  
Radio |
| **Name:** | 3. TV 3 |
| **Start:** | 00:00 |
| **End:** | 00:00 |
| **Date:** | 03/06/2005 |
| **Mode:** | Daily  
Weekly  
Once |

Only channels of the selected type will be displayed.

You will select the channel through which the required programme will be transmitted here.

Enter the required starting time here.

Enter the required ending time here.

Enter the required date here.

You will establish how often the event should be carried out with the Settings Mode.
**TV settings**

You will call up the Menu **Picture** of the analogue OSD Menu in this Menu, see Page 43.

**Common interface**

You will have to register with a corresponding provider in advance if you wish to view channels with a fee.

You will receive a Conditional Access Module (CAM Module) and a special card from your provider after the registration. You will install these components in your television device in the following way:

Switch the television device off and pull out the mains plug.

First, insert the CAM Module into the socket behind the connection cover on the left of the television device (observed from the front). Then, insert the card.

The CAM Module must be inserted correctly the right way up; it cannot be pushed in the wrong way up. The CAM Module or the television device can be damaged if you attempt to push in the CAM Module with force.

Connect the television device to the power supply, switch it on and wait for a moment, until the card is recognized.

The following installation steps are necessary in addition in the case of some CAM Modules. Please install the CAM Module by calling up the IDTV Menu initially, then the Common Interface and then pressing the OK button. (The CAM Installation Menu will only be displayed if necessary.)

You will display the relevant information in this way:

Call up IDTV; press the M button, then select Common Interface and press the OK button.

‘No Common Interface Module recognized’ will be displayed on the screen if no module has been inserted.

You will find detailed information about the settings in the documentation supplied with the module.

Pay attention to the fact that you must only insert or remove the CI Module if the device is in the STANDBY Mode or is SWITCHED OFF.
“Picture in Picture” or “Picture at Picture”

You can display two images from different sources simultaneously on the LCD-TV screen with the PIP and PAP functions (e.g. TV picture and picture from connected DVD player).

- **PIP ("Picture in Picture"):** A small picture (the PIP window) appears within the main picture.

- **PAP ("Picture in Picture" = The pictures are displayed side by side.**

**Sources for PIP and PAP**

If you wish to display two pictures in the PIP or PAP mode, the picture from one source must come from one connection of type A and the picture from the other source from one connection of type B on the LCD-TV.

- The following sources of type A are available: Aerial (TV, TV picture), Digital TV (DTV), SCART connections (EXT-1, EXT-2 and EXT-2 S), Video-Audio RCA connections and (BAV), S-Video.

- The following sources of type B are available: HDMI 1 and HDMI 2, Component connections (YPbPr) and PC.

You can therefore combine the TV picture with the picture from a connected PC, or the picture from a DVD player on a SCART connection with the picture from a DVD player on a HDMI connection.
Activating and modifying the PIP function
1. Connect a device (e.g. a DVD player) to one of the type B inputs (HDMI 1, HDMI 2, YPbPr or PC).
2. If the LCD-TV does not itself display the picture from the external device, select the source with the AV/SOURCE key or in the SOURCE menu (see page 57). The picture from the external device is now the main picture.
3. Press the key \( \square \). The PIP window (small picture) will now appear with the TV programme (aerial signal) within the main picture.
   • You can select another channel for the TV picture in the PIP window with the channel select keys.
   • You can select another source for the PIP window with the AV/SOURCE key (a device that is connected to one of the type A inputs).
   • You can switch the sound reproduction between the main window (connected device) and the PIP window with the directional keys \( \leftarrow \rightarrow \). 
   • You can swap the PIP window and the main picture with the \( \text{P}>\text{P/SWAP} \) key.
   • You can close the PIP window by pressing \( \square \) again.
The PIP menu

You can enter various settings for the PIP window.

- While the PIP window is displayed, press on the menu key **M** and open the **FUNCTION** menu (see also “Navigating within the Menu”, page 43).
- Open the **PIP** menu with the directional key **↓**.

**Menu point** | **Settings**
--- | ---
**PIP ON/OFF** | Switching the PIP function on or off.
**PIP Picture** | Open the PIP Picture sub-menu with the directional key **↓**. The settings correspond with those on the **PICTURE** menu, see page 44.
**PIP Position** | Select a position within the main picture with the **← →** key.
**PIP Source** | Select the source for the PIP picture.
When the main picture source is TV, DTV, EXT-1, EXT-2 or BAV, the PIP Window can only be set to HDMI-1, HDMI-2, YPBPR; PC source or vice versa.
**PIP Programme** | Select the programme with the directional keys **← →** or the digit keys.
**PIP SWAP** | With this you can swap the PIP picture and the main picture.
Activating and modifying the PAP function

1. Connect a device (e.g. a DVD player) to one of the type B inputs (HDMI 1, HDMI 2, YPbPr or PC).

2. If the LCD-TV does not itself display the picture from the external device, select the source with the AV/SOURCE key or in the SOURCE menu (see page 57). The picture from the external device is now the main picture.

3. Press the key \[ \text{ } \]. The PAP window (small picture) will now appear with the TV programme (aerial signal) within the main picture.
   - You can select another channel for the TV picture in the PAP window with the channel select keys.
   - You can select another source for the PAP window with the AV/SOURCE key (a device that is connected to one of the type A inputs).
   - You can switch the sound reproduction between the main window (connected device) and the PIP window with the directional keys \[ \text{ } \].
   - You can swap the PIP window and the main picture with the P>P/SWAP key.
   - You can close the PIP window by pressing \[ \text{ } \] again.
The PAP menu

You can enter various settings for the PAP window.

- While the PIP window is displayed, press on the menu key M and open the FUNCTION menu (see also “Navigating within the Menu”, page 43).
- Open the PAP menu with the directional key .

<table>

The OSD menu

You can set certain parameters on the LCD-TV using the OSD menu (On Screen Display).

Navigating within the Menu

1. Press the M button to activate the OSD.
2. Select the options from the main menu with the directional keys ◀ ▶.
3. Select the options from a menu with the directional keys ▲▼.
4. Go back to the main menu with the directional key ▲.
5. Open a sub-menu with directional key ▶ (not available in every menu).
6. Go back to the menu above with the menu key M.
7. Set the required value or enter another selection with directional keys ◀ ▶.

Close the menu with the menu key M and confirm the selection at the same time.

NB: the menu will close automatically after approx. 15, 30 or 60 seconds if no key is pressed (setting in menu Function).

ATTENTION:
The menus described here may vary from the menus on your screen because of possible technical modifications.

</tr>
</tbody>
</table>
Save video recorder manually

The manual search function can, for example, be used to set a video recorder on the LCD-TV.

Once the LCD-TV and the video recorder are connected via the aerial, you should tune your video recorder to the test signal.

- Perform the manual search action on the LCD-TV.
  Once the test signal has been found, store the test signal under channel location 0 (no TV channel is stored on this channel location).
PROGRAM TABLE

The channel table displays the currently stored channels. The channels are displayed under their channel names, insofar as the TV channel supports this function. The channel number S- or C- if the name cannot be displayed. Here "S" stands for special channel and "C" for normal channel ("Channel").

The channel memory can store 100 channels. Activate the cursor in the table with the directional key ▼. You can open another column by going to the right column with the directional key ▼ and pressing ▼ again.

Menu point | Settings
--- | ---
Name | Now you can change the channel name. Highlight the required channel name and press the red key. You can now change the first letter. Select a symbol with the directional keys ▲ ▼. – The symbols are displayed in the following sequence: A B C [t/m] Z a b c [t/m] z ( ) * + , / [space] – _ 0 1 2 [t/m] 9 .

Use the directional key ▼ to go to the next letter, and so on. At the end press the red key again to store the name.

Delete | Select the channel you wish to remove from the list and then press the yellow key. Press the yellow key again to confirm. The channels underneath will shift up one place in the table.

Insert | With this you can shift a channel to another location. Select the required channel and press the green key. Move the channel to the required location with ▲ ▼ and press the green key again. The other channels will move as well.
<table>
<thead>
<tr>
<th>Menu point</th>
<th>Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>APS</td>
<td>You can search for channels automatically with APS. Press the <strong>blue</strong> key. A text will appear: &quot;<strong>WARNING! All Prestored Programs will be deleted</strong>&quot;. Select another country if necessary with the directional keys. The country setting has an effect on the sequence in which channels are stored. Press the <strong>blue</strong> key if you want to cancel the function. Press the <strong>red</strong> key or <strong>OK</strong> to start searching. The channel table will be displayed after the search is finished.</td>
</tr>
</tbody>
</table>
**Menu SOURCE**

You can select another input source in this menu. You can also highlight a source so that you can select this directly with the **AV** key.

<table>
<thead>
<tr>

</tbody>
</table>
Headphones

Connect the headphones to the headphone connection. The main loudspeakers will remain on when the headphones are connected. Regulate the volume level of the headphones by means of the volume keys and the Switch Off Sound key. You can adjust the volume of the headphones in the SOUND menu, HEADPHONE sub-menu, see Submenu HEADPHONE.

WARNING!
In the first instance set the volume to a value at the lowest end of the scale before you put on the headphones. Then select a comfortable volume. Excessive volume can damage your hearing.

Using this appliance at full volume for extended periods of time may cause damage to the hearing capacity of the listener.

DVD player

Connect a DVD player with a SCART cable to the SCART-1 or SCART-2 connections.

You can also use red-white (for sound reproduction) and yellow (for picture transmission) RCA cables.

You can also use a S-VHS cable as an alternative to the yellow RCA cable.

If the DVD player has YUV outputs (Y Pb Pr), it is advisable to connect these using a Component cable (green/blue/red RCA) to the Y–Pb–Pr and L–R Component inputs on the LCD-TV.
**Video recorder**

Connect an aerial cable to the aerial socket of the LCD TV and the aerial output of the video recorder, if you want to connect a video recorder to the LCD TV. Connect another aerial cable to the aerial input of the video recorder and the aerial socket on the wall.

In addition you can connect an LCD-TV and a video recorder with each other using a SCART cable.

If you want to transmit stereo sound you will need a SCART connection.

---

**DVD recorder**

You can connect a DVD recorder to one of the two SCART connections on the LCD-TV using a SCART cable.

In addition connect the aerial cable in the manner described in the "Video Recorder" section (see above.)
Receiver (SAT, DVB-T, decoder, etc.)

Connect a device that is intended to be used as a receiver for the LCD TV (e. g. SAT receiver, DVB-T receiver, decoder, set-top box) or a DVD recorder to the SCART socket, with a SCART cable.

Apart from with SCART cables you can also connect the device with RCA cables:

- Connect (red-white) audio RCA cables to the audio inputs on the LCD-TV and the audio outputs on the external device.
- Connect a (yellow) video RCA cable to the video input on the LCD-TV and the audio output on the external device.
- Apart from using a video RCA cable you can also connect an S-Video video cable to the S-Video input on the LCD-TV and the S-Video output on the external device.

DVD or video recorder and SAT-receiver

If you want to connect a DVD or video recorder and a satellite receiver at the same time, you can use the following connection method:
Camcorder

- You can reproduce the sound and pictures of a camcorder on your LCD-TV by connecting the camcorder to the AUDIO-IN connections and the VIDEO-IN connection on the LCD-TV.
- Apart from using a (yellow) video RCA cable you can also connect an S-Video video cable to the S-Video input on the LCD-TV and the S-Video output on the camcorder.
Device with HDMI or DVI output

HDMI (“High Definition Multimedia Interface”) is the only interface in the entertainment electronics sector with which one can transmit audio and video data digitally at the same time. HDMI can process all picture and sound systems known at this time, including HDTV (High Definition Television), so that it can reproduce a resolution of 1080 i without loss of quality.

Many devices from the entertainment electronics sector, such as DVD players, are equipped these days with HDMI or DVI outputs.

External device with HDMI output

1. Connect an HDMI cable (not supplied) to one of the two HDMI inputs on the LCD-TV and the HDMI output on the external device.
2. Once you have connected the HDMI device then switch on the LCD-TV.
3. Then switch on the external HDMI reproduction device.

External device with DVI output

If the external device has a DVI output, you can also connect it to the HDMI input (HDMI is backwards compatible with DVI - “Digital Visual Interface”). For this you need an HDMI-to-DVI adapter.

Given that no sound can be transmitted via the DVI output, you also need to connect an audio cable with a TRS stereo connector.

If you want to reproduce the sound through the LCD-TV connect audio RCA cables (red-white)

- To the component audio inputs (position 6 on page 60) on the LCD-TV in case of HDMI-1 input.
- To the audio inputs (position 2 on page 60) on the LCD-TV in case of HDMI-2 input.

PC

The LCD-TV can be connected as a screen or additional monitor to your PC or notebook. The image on your PC or notebook will then be displayed on the LCD-TV.

Connect the LCD-TV as follows:

1. Switch off both devices.
2. Connect a VGA cable (screen cable; not supplied) to the VGA input on the LCD-TV and to the output for the video card on the PC or the notebook.
3. Tighten the screws on the screen cable with your fingers so that the plug makes a good connection.
4. If you also want sound, connect an audio cable to the AUDIO (position 2 on page 60) input.
5. Switching the LCD-TV on first.
6. Only then switch on the PC or notebook.
7. Press the key on the remote control in order to switch to PC mode. The PC image will appear on the LCD-TV. You can return to TV mode with the key.

If you use the LCD-TV as a second screen with your PC, then it may sometimes be necessary to adjust the screen settings in the operating system. You will find further information about matters you need to pay attention to when using more than one screen in the user manual for your PC or notebook.
Troubleshooting

Many times, problems have simple causes. We would like to give you some tips to solve some common problems. Should these tips not help, please call us!

There is no picture or sound.
• Check whether the mains cable has been connected to the socket and the mains adapter correctly.
• Check whether the signal reception has been set to TV.
• Check whether the mains switch of the device on the rear of the device has been switched on.

There is no picture. There is no picture from AV.
• Make sure the Contrast/Brightness is properly adjusted.
• Make sure all external devices are connected properly.
• Check whether the correct AV setting has been selected.
• If you want to select an input source with AV you need to highlight this in the SOURCE menu.

There is no sound.
• Make sure the volume is not set to minimum.
• Make sure the sound is not set to mute.

There is no picture or sound, just noise.
• The reception may be weak. Make sure the aerial is not disconnected.

The picture is not clear.
• The reception may be weak.
• Make sure the aerial is not disconnected.

The picture is too bright or too dark.
• Check the contrast and brightness settings.

The remote control does not work.
• Check whether the batteries in the remote are operational and have been inserted correctly.
• Make sure the remote sensor window is not under strong lighting.
• Switch the device off and on again with the mains switch at the rear.

The picture is not sharp.
• The reception may be weak.
• Make sure the aerial is not disconnected.
• Check the sharpness and noise suppression settings in the PICTURE menu.

A double or triple image will be displayed.
• Check if the aerial is correctly oriented.
• The signal may be reflected off hills or buildings.

The picture is spotted.
• There may be interference from automobiles, trains, high voltage lines, neon light, etc.
• There may be interference between the antenna cable and power cable. Try moving them further apart.

There are stripes on the screen or colors fade.
• Is the unit receiving interference from other devices?
• Transmission antennas of radio broadcasting station and transmission antennas of amateur radio and cellular phones may also cause interference.
• Place the unit as far apart as possible from device that may cause possible interference.

The operating buttons on the device do not function.
• The child-lock may have been activated.

Do you require additional Support?
If the suggestions in the above section have not solved your problem, please contact the hotline. We will try and help you over the telephone. However, before you contact your Service Center, please keep the following information available:
• What external devices have been connected?
• What messages appear on your display?
• During which operating step has the problem arisen?
• When a PC has been connected to the device:
  – What is the system configuration?
  – Which software were you using when the problem arose?
• What steps have you already undertaken to solve the problem?
• If you have already been given a customer number, please keep this available.

Maintenance

The lifespan of the LCD-TV can be extended by the following means:

1. Before cleaning, always remove the power adapter plug and all connecting cables.
2. Do not use any solvents, corrosive or gaseous cleaning agents.
3. Clean the display with a soft, lint-free cloth.
4. Ensure that no water droplets remain on the screen. Water can cause permanent discoloration.
5. Do not expose the screen to bright sunlight.
6. Please keep the packaging material well and use it exclusively to transport the device.

ATTENTION!
There are no user-serviceable or user-cleanable parts inside the device.
Recycling

Packaging

Your device is packaged to protect it against damage during transportation. The packaging is manufactured from materials that can be sent to a specialist recycling facility and disposed of in an environmentally-friendly way.

Device

At the end of its life, the appliance must not be disposed of in household rubbish. Enquire about the options for environmentally-friendly disposal.

Batteries

Do not dispose of used batteries in the household rubbish! They must be deposited at a collection point for used batteries.
Pixel errors with LCD TVs

Individual pixels or groups of them can fail in rare cases, in spite of the most up-to-date manufacture, because of the highly complex technology.

Active matrix LCDs (TFT) with a resolution of 1366 x 768 pixel,(WXGA) which are in turn composed of three sub-pixels each (red, green, blue), contain about 3 million addressable transistors. Because of this very high number of transistors and their extremely complex production process occasionally defective or incorrectly addressed pixels or sub-pixels may occur.

</table>

The Table describes the maximum number of pixel faults that are permitted to arise on the screen, without involving a guarantee case. Under certain circumstances, a guarantee case will be present if the number of faults given above is exceeded in one category.
Wall Mounting

You can mount the LCD-TV onto a wall.

Accessories

The following accessories are supplied with the LCD-TV:
2 steel rails, 4 screws, 4 plastic hanging elements, 1 drill template,
1 illustrated mounting manual (applies to several types of device).
You will also need 8 raw plugs and screws for fixing to the wall (available in trade shops).

Safety instructions for wall mounting

Be certain to adhere to the following safety instructions when mounting the unit on the wall:

- The LCD-TV must only be mounted onto straight perpendicular walls.
- Check before mounting if the load-bearing capacity of the wall equals at least three times the weight of the device (16 kg). Ask a qualified fitter for advice if in doubt.
- Switch the LCD-TV off before starting with mounting. The mains cable and aerial cable must be unplugged.
- At least two persons are required to carry out mounting.
- You will require an electric drill and a cross-head screwdriver to carry out the mounting.

ATTENTION!
Make sure that the raw plugs and screws that you select are suitable for your wall.
Mounting the hanging elements and the device

1. Push the supplied M4 x 10 screws through the plastic hanging elements. The side with the smallest diameter on the plastic hanging elements is to be found on the outside.

2. Tighten the screws with the plastic hanging elements in the correct screw holes on the rear of the device.

Remove base

The base of the device is fixed to the rear with six screws.

1. Undo the six screws with a cross-head screwdriver.

2. Lift up the device, away from the base.
Fixing the steel rails to the wall

1. Select a location on the wall where there is sufficient distance between the LCD-TV and other objects (see section Point of use).
   Bear in mind that the hanging elements on the rear of the device will fit into the narrow ends of the hanging openings in the steel rails.
2. Mark the eight drill holes in the wall with the supplied drill template.
3. Drill the eight holes for the raw plugs in the wall.
4. Insert the raw plugs.
   ATTENTION!
   The raw plugs must fit tightly! Do not hang the device on the wall if the raw plugs are not tightly fixed.
5. Attach the two steel rails each with four screws. The narrow sides of the hanging openings must face downwards.
6. Now you can hang the LCD-TV on the steel rails.
