Safety instructions

Please read these operating instructions thoroughly and follow them, paying special attention to the safety instructions, before using the appliance for the first time. This device may only be used as described in the operating instructions. Always keep these operating instructions at hand but store them safely so that you can pass them on to a new owner should you sell the unit.

- Do not let children play with electrical appliances without supervision. Children cannot always recognise potential hazards correctly.
- Keep your appliance away from sources of moisture.
- Place and operate the unit on a stable, even surface which is vibration-free to avoid it falling off.
- Never open the appliance’s housing! You could receive an electric shock!

Applications
Only use the unit in your living room or similar areas.

Electromagnetic compatibility
- You must comply with the European directives on electromagnetic compatibility (EMC) when you connect the appliance.
- Keep the appliance at a distance of at least one metre from high frequencies and magnetic sources of interference (television, loudspeaker boxes, mobile telephones etc.) to avoid malfunctioning and data loss.
- Only used a screened USB cable for connecting the webcam to your PC.
Connections
• Position the cable so that nobody is able to step on it or trip over it.
• Do not place any objects on the cable to avoid damaging it.

Repairs
• Please contact our service centre if you have technical problems with the device.
• Ensure that defective appliances or damaged mains cables are repaired immediately by a specialist workshop or contact your Medion Service Centre to reduce risks.

Cleaning
• Please make sure the webcam, particularly the lens, does not get dirty.
• Use a damp cloth to clean the webcam and stereo headset.
• To clean, do not use solvents, corrosive or aerosol detergents.

Backup

Note
Always backup your data onto an external storage device (e.g. CD-R, external hard drives) after it has been changed or updated. We do not accept any liability for claims for compensation arising from loss of data or any damages incurred.
Package contents
Please check your purchase to ensure all items are included and contact us within 14 days of purchase if any of the following components are missing:

- Webcam with integrated USB cable
- Stereo headset with integrated 3.5 mm cable (green, pink) and jack
- Installation and application programs on CD
- Operating instructions and guarantee documents

**Important**
You need to enter the following serial numbers when installing the software included:

YK36941782K88364

System requirements

- Operating system Microsoft Windows XP/Vista/7
- Processor 1.6 GHz processor or faster
- Installation CD-ROM/DVD-drive
- Disk storage 200 MB or more free fixed disk storage
- Connection USB, microphone and headphones connection
View

1  Snapshot-button (using YouCam 3)
2  Power light
3  Lens
4  Fold-out camera base
5  Connection cable
1 Ear cup
2 Microphone
3 Connection cable
Start of operation

Installing the software

Caution!
Important files may be changed or overwritten when you are installing programs or drivers. Before installing the program make a backup of your original files which you will be able to access later if problems occur after installing the software.

Note
Install the software before connecting the webcam and stereo headset. You must install the supplied software as the webcam can only be operated in conjunction with this software.

Note
A dialogue box will appear if your system is set up to install signed software/drivers (released by Microsoft) only. The wording in the box will differ from system to system. Example: “The ..... driver you wish to install did not pass the test .....”.
This does not indicate that the driver is faulty, but merely points out that there is no Microsoft signature. You can skip this screen. Click “Next” to install the driver.
Place the CD in the drive. The installation menu will start automatically.

**Note**
If installation does not start automatically the so-called “Autorun” function may be disabled.
Manual installation without Autorun:
- Click “Start” and select the “Run” feature.
- Now enter the name (letter) of the CD-ROM drive followed by a colon and “autorun\demo32.exe”.
- Confirm with “OK”.

The installation menu will suggest the following items for installation:
- PC camera driver (hardware driver)
- Cyberlink YouCam 3 (camera software)
- Install the hardware driver and the camera software in sequence. Follow the instructions on the screen.
- Re-start your computer.

**Note**
To use the image processing program, please read the corresponding online help manual. Click the question mark in the program to call up the online help.
Connecting the webcam to the PC

Connect your webcam to your computer as follows:
The driver software must already be installed.

- Switch on the computer and all peripheral devices (monitor, printer modem, etc.) and wait until operating system has finished booting.
- Insert the end of the USB cable (1) into one of your computer’s empty USB ports (2).
- Windows® will recognise that new hardware has been connected and will complete the installation.

Note
Never unplug the connection cable from the computer while the camera is running. This could cause the software to crash.

Setting up the camera

The webcam provides the best viewing angle when mounted on the monitor. Experiment until you find the best position.

Please note the following:
- The ideal angle is achieved by setting up the webcam in the centre of the monitor.
- You can also set up the camera on a table or hold it in your hand.

You can turn the camera body on the base to achieve the desired angle.
Connecting the stereo headset to the PC

You can connect the headset while the computer is running.

- Insert the 3.5 mm pink jack into the microphone input on your sound card.
- Insert the 3.5 mm green jack into the output socket on the sound card.

Using headphone/earphones at high volume can result in permanent hearing damage. Before pressing play, set the volume to the lowest setting. Start playback and increase the volume to a comfortable level. Changes to the basic equalizer settings can also damage your hearing permanently.

Troubleshooting

The image display on the monitor is not clear.
- The lens is dirty or streaked.

The camera is not recognised.
- Check all cable connections.

There is no sound from the headset.
- Check all cable connections.
- The volume is too low.
Technical support

The webcam has been thoroughly and successfully tested in our test laboratory with a wide variety of devices. However, the drivers will need to be updated from time to time. This is because there may be compatibility problems with other components which were not tested (programs, devices). To make sure you have the latest software version for your camera we recommend downloading it from www.medion.com. Go to Service & Support then Drivers & Software and enter the serial number of your device, which is on the underside of the unit or on the packaging.

Disposal

Appliance
At the end of its life, the appliance should not be disposed of in household rubbish. Enquire about the options for environmentally friendly disposal.

Packaging
Your appliance has been packaged to protect it against transportation damage. The packaging is made of environmentally friendly material which can be recycled.
## Technical specifications

**Webcam**
- **Port**: USB 2.0
- **Sensor**: 2.0M CMOS sensor  
  1600 x 1200 pixels
- **Power supply**: 5 Volt (USB)
- **Software compatibility**: Windows XP / Vista / 7

**Stereo Headset**
- **Port**: 3.5 mm jack  
  (green, pink)
