INSTRUCTION MANUAL

MEDION

Medion Electronics Ltd.
126 Foreday Park
Tuesday Road
Southend-on-Sea
ESSEX SN2 9HP

Tel: 0870 720 8781 (UK)
Fax: 0870 8800 118 (UK)

To contact the medion bases visit the "Service and Support" section of our website at www.medion.co.uk
**Notes on this manual**

Keep these instructions with your computer at all times. The proper set up, use and care can help extend the life of your computer. In the event that you transfer ownership of this computer, please provide these instructions to the new owner.

This manual is divided into sections to help you locate the information you require. Along with the Table of Contents at the beginning of this manual, an Index has been provided to help you find topical information.

If you want to start up your PC immediately, please read the chapters **Operational Safety** (page 3) and **Setting up and Getting Started** (page 8).

We strongly recommend you read this entire manual to ensure the proper set-up and operation of your PC.

Many application programs incorporate extensive help functions. As a general rule, you can access help functions by pressing F1 on the keyboard. These help functions will be available to you while you are using the Microsoft Windows® operating system or the respective application program.

We **strongly recommend** that you read the Online Manual for your PC, which can be found in the **Start Menu**.

**Information about your PC**

This interactive manual is designed to provide additional information about your PC as well as useful links accessible via the World Wide Web.

Windows XP invites you to a **tour** (notes on the task bar) to familiarize yourself with the operating system. We listed further useful sources of information starting on page 63.
Audience

These instructions are intended for both the novice and advanced user. Regardless of the possible professional utilisation, this PC is designed for day-to-day household use. The functions and applications for use with this PC have been designed with the entire family in mind.

Purchase details

Enter your purchase details below for quick reference.

Serial Numbers ...........................................
(i.e. Microsoft®) ...........................................
Place and date of Purchase .................................

You will find the PC serial number on the rear of the PC. Also copy this number into your guarantee documents, if necessary.

Quality

Medion has selected the components in this computer for their high level of functionality, ease of use, safety and reliability. Through balanced hardware and software design we are able to provide you with an innovative personal computer useful for applications relating to both work and leisure.

We are pleased to welcome you as our newest customer. Thank you for choosing our products.

<td>4</td>
</tr>
</tbody>
</table>
Operational safety

Please read this chapter carefully and observe all listed notes. This ensures a reliable operation and long life expectancy of your PC.

- Do not allow children to play unattended with electrical equipment. Children are incapable of judging potential risks properly.
- Keep the packing materials, such as foil away from children. The danger of suffocation could arise in the case of misuse.
- Do not open the PC casing or use the PC with the casing removed. When the casing is open there is a danger to life from electric shock.
- Optical drives are Laser Class 1 devices. These lasers must remain in their sealed PC casing. Do not remove the drive covers, as exposure to the lasers may prove harmful.
- Do not insert objects through the slots and openings of the PC. This may lead to electric shock or an electrical short-circuit or fire that will damage your PC.
- Do not cover the slots and openings in the PC casing. These openings are for ventilation purposes. Covering these vents may lead to overheating. Please keep free a minimum distance of 20 cm on all sides when setting up the PC.
Operational safety

Switch off your PC immediately or do not switch it on at all and contact customer service ...

- ... if the power cord or the connectors attached to it are burnt or damaged. Replace the defective power cord with an original power cord. Under no circumstances may a defective power cord be repaired.
- ... if the housing of the PC is damaged or fluids have leaked into it. Have the PC checked by customer service first, because the PC may not be safely operated otherwise and there may be a life-threatening risk of electrocution!

Data security

Attention!

Every time you update your data make back-up copies on an external storage medium. The supplier does not assume liability for data loss or damage to data storage units, and no claims can be accepted for damages resulting from the loss of data or consequential losses.
# Chapter 2

## Setting up & Getting started

Included with your PC

Please check that the contents listed below are supplied with your package and notify us within 14 days of purchase if this is not the case. You MUST provide your PC’s serial number when contacting a customer service representative.

Your PC bundle should include the following components:

- PC and power cord
- Wireless keyboard and mouse set containing of:
  - Wireless Windows keyboard + 2 batteries type Mignon (AA) 1,5V
  - Wireless mouse + 2 batteries type Mignon (AA) 1,5V
  - PS/2 receiver
  - Remote control type OR24E + 2 batteries type Micro (AAA) 1,5V
- OEM Version of Operating System
- Application-/ Support Disc
- Documentation
Setting up

Remember that choosing the proper location for your PC is just as important as connecting it correctly.

Set-up location

- Keep your PC and all units connected to it away from moisture, dust, heat and direct sunlight. Failure to observe these instructions can lead to malfunctions or damage to the PC.
- To prevent damage to your PC from a fall, place and operate the PC and all connected units on a stable, balanced and vibration-free surface.
- Your PC is not suitable for use at video workstation devices in the sense of §2 of the video workstation regulation.

Ambient temperature

- The PC can be operated at an ambient temperature of between 10° and 35°C (+41° and +95°F) and at a relative humidity of between 30% and 70% (without condensation).
- When powered off, the PC can be stored at temperatures between -20° and 50°C (~40° and +158°F).
- Unplug the cable during thunderstorms and make especially sure to remove the antenna cables, if present. We recommend the use of a surge protector for additional safety, in order to protect your PC from being damaged by power peaks or lightning strikes through the power network.
- Delay operating a PC after transport until the device has adjusted to the ambient temperature. In situations of large temperature or humidity differences condensation may build up moisture inside the PC, which might cause an electrical short circuit.
Ergonomics

Note
Ensure that the monitor is set up in such a way that reflections, glare and light/darkness contrast are avoided.

You should not position the monitor in close proximity to a window, because this is the brightest area of the room because of daylight. This brightness impedes the adjustment of the eyes to the darker monitor.
Always position the monitor in a line of sight that runs parallel to the window front (see picture).
You should also apply a parallel line of sight with respect to artificial lighting. This means that in a room lit by artificial light essentially the same criteria and objectives apply. Should it not be possible to arrange the monitor as outlined above, the following measures might be helpful:
- Turn, lower or incline the monitor.
- Place horizontal or vertical shades at the windows.
- Working in Comfort
Setting up

Note
Take regular breaks from the work at your screen to prevent tenseness and exhaustion.

Sitting in one position for long periods can be uncomfortable. To minimize the potential for physical discomfort or injury, it’s important that you maintain proper posture.

Overall:
Change your position frequently and take regular breaks to avoid fatigue.

Back:
While sitting at your work surface, make sure your back is supported by the chair’s backrest in erect position or angled slightly backwards.

Legs:
Your thighs should be horizontal or angled slightly downward. Your lower legs should be near a right angle to your thighs. Your feet should rest flat on the floor. If necessary, use a footrest, but double check that you have your seat height adjusted correctly before getting a footrest.

Arms:
Your arms should be relaxed and loose, elbows close to your sides, with forearms and hands approximately parallel to the floor.

Wrist:
Your wrists should be as straight as possible while using the keyboard, mouse or trackball. They should not be bent sideways, or more than 10 degrees up or down.

Head:
Your head should be upright or tilted slightly forward. Avoid working with your head or trunk twisted.
• Hand rest: 2” – 4”
• Top line of screen at eye level or slightly below
• Viewing distance: 20” – 27.5”
• Legroom (vertical): minimum 25.5”
• Legroom (horizontal): minimum 23.6”
Connecting

For a better guidance, open up the left inner page of the cover with the diagrams to find the location of the described connections.

Note:
The devices listed are not necessarily included with your PC.
All the connections listed are optional and will not inevitably be available on your PC.

Cabling
Please follow the instructions below in order to correctly connect your PC:

- Arrange cables in such a way that no one can tread on or trip over them.
- **Do not place objects on the cables.**
- To avoid damage to your PC, connect your peripherals (e.g., keyboard, mouse and monitor) whilst your PC is powered off. Some devices can be connected whilst your PC is in use. These devices usually have a USB or IEEE 1394 connector. Please follow the appropriate instructions for each device.
- Keep the PC at least one meter (approximately three feet) away from **high frequency** and **magnetic interference sources** (e.g., televisions, loudspeaker cabinets, mobile telephones, etc.) in order to avoid malfunctions and/or loss of data.
- Please note that only **shielded** cables shorter than 3 metres (9.84 ft) should be used for the LPT, COM, USB, IEEE 1394, audio, video and network interfaces with this PC.
- To avoid EMC issues, make sure that all devices are connected to each cable or that cables not in use are removed from the computer.
- Do not replace the cables supplied with the machine by any others. Use the cables belonging to the scope of the delivery exclusively, because they will have been tested extensively in our laboratories.
- Also only use the connection cable supplied with the devices for the connection of your peripheral devices.
- Make sure that all connection cables have been connected to the peripheral devices associated with them, in order to avoid disruptive radiation. Remove unneeded cables.
- The connection of devices is limited to equipment that complies with EN60950 “Safety of information technology equipment” or EN60065 “Audio, video and similar electronic apparatus. Safety requirements”.
- In the first hours of operation, new devices may emit a typical, unavoidable but completely harmless smell, which will decline increasingly in the course of time. We recommend you to ventilate the room regularly, in order to counteract the formation of the smell. During the development of this product, we have made sure that the applicable limits are clearly fallen below.

**Note**

You only need to connect those components to your computer you require. If you do not have the described device (e.g. printer) you may skip the respective item and carry it out later, if necessary.
Front connectors

Diagram reference: D

Some connections are located behind the front flap. This offers you the great advantage of creating frequently used connections quickly and conveniently, without turning the PC round. The flap, which can be slid, also protects the connections.

Press on the front screen, so that it folds open. The right image shows the opened screen.

Turn the screen back to its starting position.

(similar picture)
Connecting speakers/audio output

Diagram reference: S

Here you can connect your headphones, active speakers or audio connection cables for recording. Please refer to the user's guide of your stereo installation for information about which connector you should use (usually Line In or Aux).

1. Connect your headphones or active speakers by plugging the cable with the 3.5 mm stereo jack plug into the green socket (reference S).

PCs with surround sound

Diagram reference: E

Connect your surround equipment as follows:

1. Connect the Front speaker to the green socket (front out).
2. Attach the rear loudspeakers to the connector back surround.
3. Your centre speaker or subwoofer can be connected to the socket center/bass.
4. Connect to the optional side surround socket some more speakers for the back surround.

A digital audio output (SPDIF) can be connected to an optical and/or a coaxial cable.

1. Plug the Cinch or an optical cable to the socket at Position G1.
2. Connect the other end of the cable to an audio device with a corresponding digital input.
Connecting a sound source/audio input

Diagram reference: F1, F2
This port is used to accommodate a connecting cable for external analogue audio sources (i.e. stereo system, synthesizer).

1. Connect the cable with the 3.5 mm stereo jack plug to the light-blue coloured socket (reference F1).
   Optionally, you can connect a stereo Cinch cable (position F2).
You will be able to connect digital audio sources according to the version.

Diagram reference: G2
1. Connect a Cinch or an optical connection cable to the audio input at Position G2.
2. Connect the other end of the cable to an audio device with a corresponding digital output.

Connecting a microphone

Diagram reference: T
1. You can use the pink socket T to connect a microphone with a 3.5 mm mono jack plug.
2. Position the microphone in such a way that it does not point directly at the speakers. If you hear feedback, characterised by loud whistling noises, reposition the microphone until the sound stops.
Connecting parallel devices

Diagram reference: H

Note
Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

Use a doubly screened, parallel connection cable (25-pin) to connect a printer:
1. Connect the printer cable from your printer to the red printer socket H on the rear of your PC.
2. Hand-tighten the screws of the printer cable.

If you wish to use a scanner, which also connects to the PC via the parallel interface, you must attach the corresponding scanner cable here. If desired, the printer can then be attached to the scanner.

Connecting serial devices

Diagram reference: I

You can connect an external modem or another serial device using this port.

Note
Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. In order to connect an external modem, card reader or other serial device, connect the serial cable with the turquoise-coloured connection socket (I) on the rear of your PC.
2. Hand-tighten the screws of the serial cable.
Connecting a PS/2 devices

Diagram reference: J
If you want to connect a USB mouse or a USB keyboard, you can omit this step.

1. Connect the mouse cable to the green PS/2 port.
2. Connect the keyboard cable to the blue PS/2 port.

Installing wireless keyboard & mouse
The wireless keyboard and mouse operate with digital radio technology to ensure no hinder communication between the keyboard, the mouse and your computer without connecting cable. The transmission and receiving of keyboard and mouse are free from angle restriction. Before working with your new keyboard and mouse, take a few one-time preparations.

Beware!
Please read and follow the security advices concerning the use of batteries on page 86.

Inserting batteries in keyboard
The keyboard requires two alkaline batteries (AA).

1. Remove the battery compartment cover on the bottom of the keyboard by pushing it in the direction of the arrow.
2. Insert two AA batteries. The illustration on the cover shows how to insert the batteries properly.
3. Recover the battery compartment.

Note
If the battery status indicator on the keyboard lights up, exchange the batteries and possibly conduct a frequency control.
**Inserting batteries in mouse**
The mouse requires two alkaline batteries (AA).

1. Remove the battery compartment cover on the bottom of the mouse.
2. Insert two AA batteries. Ensure that the polarity corresponds to the illustration (+ must correspond with + and – with –).
3. Replace the battery compartment cover on the bottom of mouse.

**Note**
If, during operation, the battery status indicator lights up with red, the batteries are empty. Exchange the batteries and possibly conduct a frequency control.
Connecting the receiver

Diagram reference: J

1. Attach the receiving station for the mouse and keyboard to the correspondingly coloured sockets on your PC marked PS/2. (green = mouse, blue = keyboard).

2. Set up the receiver with a minimum distance of 20 cm. to other electrical appliances (e.g. monitor) in order to obtain optimal results. The distance between the receiving station and transmitters (keyboard and mouse) should not exceed 1.50 m., in order to have optimal radio conditions. Do not place the receiver on metal surfaces.

**Note**

Change the batteries if it is no longer possible to make entries smoothly.

The operation of the mouse and the keyboard is described on page 35.

Channel Control

If different radio sets in operation should cause interference for one another, you can change the channels of the devices; in doing so, the mouse and the keyboard must have the same channels. The receiver independently recognizes the channel. Subsequently, install the receiver once again.
Setting the frequency

1. Press the automatic frequency control on the receiver.
2. Within **15 seconds**, press the automatic frequency control key of the mouse with a pointed object (ball-point pen face or the like).
3. Move the mouse. If the LED on the receiver lights up and the mouse pointer (if available) moves, the control has taken place. If this is not the case, repeat Steps 1-2.
4. Press the automatic frequency control on the receiver.
5. Within **15 seconds**, press the automatic frequency control key of keyboard.
6. Press the space bar on the keyboard. If an LED on the receiver lights up, the control has taken place. If not, repeat steps 4-5.
7. The devices are now coordinated with one another. If several equipment sets are operated at the same time and, because of this, there is mutual interference, repeat Steps 2-7 until the interference is remedied.
USB/IEEE 1394

Warning!

Connect your USB-/IEEE 1394 devices after initial set-up of your new PC. This will prevent unnecessary confusion during installation. These devices can generally be connected during operation. Read the manual for your peripheral device first.

The voltage outputs of your PC for IEEE 1394 as well as for USB are protected by a fuse (limited power source according to EN60950). This ensures that a malfunction of the PC will not damage the peripheral devices connected to the respective jacks.

Connecting IEEE 1394 (Fire Wire) devices

Diagram reference: K

Note

Peripheral devices can have different connecting cables (6-pole, 4-pole). Please check what kind of cable you need for your peripheral device.

Important

The connectors of the front side are not configured for parallel use.
Connecting USB devices

Diagram reference: L

You have a choice of several connection sockets. It does not matter which you use.

3. If you wish to use a printer, scanner or other device with a USB port, connect the cable to the USB socket on your PC.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connect your devices always to the same port otherwise your operating system will give a new ID and asks for driver installation.</td>
</tr>
</tbody>
</table>

LAN connection

Diagram reference: M

Your PC is equipped with a network connection, in order to prepare it for network operation.

The network cable usually has two RJ45 plugs so that it is unimportant which plug is connected to which jack.

1. Connect the one plug of the cable to the PC jack.
2. Connect the other plug to the other PC or hub/switch.

For further information refer to chapter “The Network” starting at page 54.
Connecting the monitor

Diagram reference: \textbf{N}

Ihr PC is equipped with a \textbf{VGA}, \textbf{DVI} and a \textbf{HDMI} connector.

\textbf{Note}

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. Connect the data cable of the monitor to the socket on the graphics card (diagram reference \textbf{N}). If necessary, remove the white guard-ring on the monitor plug.
2. After connecting a VGA device, strongly turn the screws on the monitor cable.

\textbf{Caution!}

Your PC monitor is preconfigured for a screen resolution of \textbf{1024 x 768} pixels and an optimal refresh rate of \textbf{75 hz}. If your monitor does not support these settings it may become damaged or malfunction during use. You can change the screen resolution and configuration of your monitor as follows (See also your monitor's User Manual).

You can change the screen resolution and configuration of your monitor as follows:

1. Once you have powered on the PC, press the \textbf{F8 key} until a start menu appears.

\textbf{Note}

If you don’t hit the F8 key on time, you won’t see the start menu and you have to reboot your PC.

2. Select \textbf{Display Properties} to designate the screen resolution for your monitor.
3. You can then adjust the “Display Features” to your monitor.

Antenna connection for TV receiver

Diagram reference: O1, O2

DVB-S TV reception
Through the DVB-S port (O1), you can watch television with your digital satellite device.
On the TV socket, attach your TV card (O1) to your satellite device.

Analogue TV reception
Diagram reference: O2
1. Connect a terrestrial aerial or cable television to the TV socket (O2) of your TV card.

DVB-T TV reception
Diagram reference: O2
You will have the possibility of using these services by means of a corresponding aerial, if DVB-T or digital services are offered at your location.
1. Connect a DVB-T aerial to the TV socket (O2) of your TV card.
**TV-out**

Diagram reference: **N, P1, P2, P3**

You can attach a television set to the video exit (TV-out) and transfer it to your computer display. You will be able to use a SCART cable (**P1**), a composite cable (Cinch, **P2**), an S-video cable (**P2**) or a component cable (**P3**).

You will be able to use a composite cable (Cinch) or an S-video cable.

Alternatively, if your television set has an appropriate port, you can use the digital HDMI connection (High Definition Multimedia Interface) (**N**) for the transmission of picture and sound signals.

**Note**

The video exits can be used only for playback.

1. Connect your PC and your television with the cord required for your TV.

**Connecting a recording source / video inlet**

Diagram reference: **U**

You can connect an external video source to your PC using an S-Video or composite (cinch) cable. These connections enable you to record and, if necessary, edit video data.

1. Connect a composite connection cable or an S-video cable to the jack **U**.

**Note**

The S-video or composite (Cinch) connections on the front cannot be used at the same time.
Connecting the power supply

Diagram reference: Q

Finally, connect the power supply to your PC and monitor.

1. Plug the main connection cable into the plug socket and connect it with the main cable connection (Q) of your PC.

Observe the following safety precautions:

<table>
<thead>
<tr>
<th>Please note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Even with the power switch switched off some parts of the device receive current. You must unplug the power plug from the socket, if you want to interrupt the power supply to your PC or cut off your device from current entirely.</td>
</tr>
</tbody>
</table>

- The power socket must be in the vicinity of the PC and within reach of the power cables.
- Only operate the PC on grounded plugs of the domestic power net.
- Use only the supplied power cord.
- To provide additional protection against electric shock, power surges, lightning strikes, or other electrical damage to your PC, we recommend the use of a surge protector.
- If you are using an extension cord, ensure that the cord meets your local safety requirements. If in doubt, ask an electrician.
- The standard power supply unit has an On/Off switch that can be used to power on/off the PC. When the switch is OFF (0) no power is being consumed.

Do not start your PC yet!
First, read the following section to find out what you need to know in order to get started.
Getting started

The software on this PC comes **fully pre-installed**. You do **not have to load any of the CD's/DVD's supplied**.

With many programs (e.g., telephone-CD's or encyclopaedias), however, it is necessary to insert the corresponding CD/DVD in order to call up the data which is stored on it. The software will ask you to do this as necessary.

Once you have made all the connections and secured the necessary connectors (from page 12) you can turn on the monitor, the other peripherals and finally the PC itself.

**Step 1: Power on**

1. Power on the monitor.

**Switch**

   2. Power on your PC by pressing the **Switch** to position 1.
      (You will interrupt the current entry by pressing the switch to position 0.)

**Note**

The PC now turns on and immediately switches off. This procedure repeats itself whenever the PC is separated from the supply of electricity and is necessary for the use of the "Multimedia at the Push of a Button" function.

**On/off switch**

   3. Press the on-off switch once in order to switch on your PC.
      (diagram reference, **A2**)

You can program the function of the main switch in the power management of Windows® (please refer to on-line help). The PC
will always be switched off, if the main switch is pressed for more than 4 seconds.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the operating system is not shut down properly (through menu Shut Down), then there is a risk of data loss.</td>
</tr>
</tbody>
</table>

**Step 2: Starting initial setup**

The PC starts and now goes through a number of phases:

<table>
<thead>
<tr>
<th><strong>Note</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Ensure that there is no bootable CD (e.g. the Recovery-CD) in the CD-ROM drive. Such disks will prevent the operating system from loading directly off the hard drive.</td>
</tr>
</tbody>
</table>

The *operating system* is loaded from the hard disk. During the initial set-up, the loading process takes slightly longer than normal to register the operating system and the individual components completely. Your operating system is finished loading when a welcome screen is shown on your display.

Follow the instructions on the screen. Dialogue boxes will explain any steps that need to be taken. The greeting procedure will guide you through the following screens and dialogues.

Should you have any questions just click on Help.

**License agreement**

Please read through the license agreement carefully. It contains important legal information on the use of your software. In order to see the full text, use the mouse and the scroll bar to move downwards until you have reached the end of the document. You accept the agreement by clicking on the I accept the agreement option field. Only by doing so will you be entitled to use the product under lawful terms and conditions.

**Computer name**
Please note, that when assigning a name to a computer, the **computer name** and the **user name** may not be identical.

**Step 3: Finalizing**

After the login procedure the Windows® desktop appears on your screen.

This can be adjusted so that the screen of your computer looks different. The basic operation, however, is ensured.

**Short description of the Windows® desktop**

(The respective illustration is shown on the next page.)

- **The Start button**
  Click once on this button with your left mouse key to call the illustrated start menu.

- **Program bar**
  The most commonly used programs are listed here. The operating system recognizes them automatically. If you press the right mouse key on an entry you can determine which entry is kept and which is deleted from the list. The program associated with the entry will **not** be deleted.

- **All programs**
  Here you find the entries to every program installed on your PC. Here, too, you can edit entries with the right mouse key.

- **Information about your PC**
  Click on this button once with the left mouse key to receive important information about your PC as well as valuable hints and additional assistance.

- **Switching off**
  Click on this button with the left mouse key to switch off the PC.

- **Task bar**
  Here you receive information and status reports about the operating system and the running programs.
“Icons” on the “Desktop”

Icons are program links used to start the respective programs. A double click (press the left mouse key quickly twice) on the symbol starts the application.

The Desktop includes almost the complete screen and is the filing area for those entries or other links you would like to access quickly.

Logged in user

This shows the logged in user. The image is changed by clicking on it.

Control Panel

This is the central control of your computer. Here you are able to configure your computer at will. However, you should read about the implications of possible changes in “Help and Support”.

[Image of a computer desktop with labeled icons]
# Chapter 3

**Operation**

Multimedia at the push of a button

Your PC is supplied with an additional multimedia function that will enable you to play photo slideshows, video DVDs, audio CDs or MP3 files by pressing a key, without having to start the Windows® operating system.

Read how you can use this ‘Linux Power Cinema’ program in the following section.*

Switch Power Cinema On

If the PC is switched, press the Multimedia at the Push of a Button button (A1) just left of the multifunction display. The Windows operating system will be started or shut down again at the same time.

Switch Power Cinema off

It is possible to leave the application in three ways:
1. Press the On/Off Switch (A2) of your PC briefly.
   or
2. Press the On/Off Switch of the remote control.
   or
3. Select the ‘Switch Off’ Menu point.

* The card reader cards will not be supported here.
The mouse

The mouse has beside the two key a wheel that can be used as:
To scroll through a document or internet pages.

If the mouse course moves jerkily on the screen, try a different surface (mouse pad). Glass and metallic surfaces might cause problems.

Power-saving function

You can activate the power-saving function of your mouse by pressing both mouse buttons for longer, if you do not wish to use your mouse for an extended period, for example if you have to do typing work for a long time. This serves to minimize battery consumption.

In order to switch off the save electricity function once again, briefly click a mouse button.
The keyboard

This section contains useful information on using the keyboard. All diagrams are *schematic*.

**Tilt Angle of the Keyboard**

On the base of the keyboard are two folding feet that let you adjust the angle of the keyboard. Pull them forward to adjust the angle of the inclination.

![Adjustable Feet Diagram]
The Alt and Ctrl keys

The left Alt key performs certain functions in conjunction with other keys. The application program determines these functions. In order to enter a combination of keys that include the Alt key, hold the Alt key down while pressing the other key. The right Alt key operates in a similar way but selects certain special characters. The Ctrl key, like the Alt key, carries out program functions.

Useful key combinations (software-dependent):

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Function and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alt + F4</td>
<td>As a rule ends the program selected or closes the window opened.</td>
</tr>
<tr>
<td>Alt + Print screen</td>
<td>Copies the image of the window currently active to the clipboard.</td>
</tr>
<tr>
<td>Shift + 2</td>
<td>Generates the @ character required for e-mails (pronounced: at).</td>
</tr>
<tr>
<td>Ctrl + Alt + Del</td>
<td>Windows security is launched.</td>
</tr>
</tbody>
</table>

(Country-specific variances are possible.)

Multimedia functions

Some keyboards are provided with multimedia keys. These keys have the following functions:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>←</td>
<td>Back - switches to the previous web page.</td>
</tr>
<tr>
<td>→</td>
<td>Forward – as soon as you press the Back key at least once, you can page forwards.</td>
</tr>
<tr>
<td>×</td>
<td>Cancel - stops a web page from loading.</td>
</tr>
<tr>
<td>Symbol</td>
<td>Function</td>
</tr>
<tr>
<td>--------</td>
<td>----------</td>
</tr>
<tr>
<td>🔄</td>
<td>Refresh - refreshes the active window.</td>
</tr>
<tr>

<tr>
<td>🔊</td>
<td>Quieter - lowers the volume.</td>
</tr>
<tr>
<td>🔊</td>
<td>Louder - increases the volume.</td>
</tr>
<tr>
<td>⏯️</td>
<td>Play / Pause - starts the audio and/or video playback. If you press this key for a second time, you activate the pause function.</td>
</tr>
<tr>
<td>■</td>
<td>Stop – Use this key to end playback of the current track/title.</td>
</tr>
<tr>
<td>⏪</td>
<td>Previous Track - Use this key to skip backwards to the previous track/title.</td>
</tr>
<tr>
<td>⏯️</td>
<td>Next Track - Use this key to skip forward to the next track/title.</td>
</tr>
<tr>
<td>🔁</td>
<td>Mediaplayer - opens a Mediaplayer.</td>
</tr>
<tr>
<td>🎵</td>
<td>My Computer Opens “My computer”.</td>
</tr>
<tr>
<td>📐</td>
<td>Calculator - Activates the Windows calculator.</td>
</tr>
</tbody>
</table>
The hard drive

The hard drive is the main storage medium combining large storage capacity and rapid data access. The hard drive contains the operating system of the computer, other application programs and backup files. These programs and files are pre-installed on your PC, so you may note that some of the space on your hard drive is already taken. The Windows operating system cannot use the full capacity of the hard drive, which means that there will be a difference between the capacity that the BIOS displays and what the operating system displays. The operating system of the PC, further application programs and backup files are located on the hard drive and reduce its total capacity. The hard drive is addressed as drive C and D.

Note
Never switch off the computer while the busy indicator is lit since this may result in loss of data.

Usually your hard disk is divided into more partitions, but there can also be some minor variations. In your first partition (Boot) you will find your operating system, application programs and the users’ documents and settings. The second partition (Recover) serves for data security and contains additional drivers and tools. The backup files are also found here (D:\Recover). They allow you to reset your computer to its original factory-set configuration. (Please see page 70.)
**Important directories**

In the following we listed the most important directories describing their contents.

<table>
<thead>
<tr>
<th>Attention!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not delete or modify these directories or their contents since data could be lost or the functionality of the system could be at risk.</td>
</tr>
<tr>
<td><strong>Also observe:</strong> If you convert the second partition with the recovery file into an NTFS file system, you can no longer reestablish the delivery status (☞ s. 76) through the support disk</td>
</tr>
</tbody>
</table>

**C:**
The master directory of drive C: includes important files required to start Windows. In the factory setting these files are hidden for safety reasons.

**C:\Programs**
As the name suggests, in this directory programs install the files belonging to the application.

**C:\Windows**
The main directory of Windows. This is where the files of the operating system are saved.

**C:\Documents and Settings**
This folder includes the settings and documents of all the PC users.

**D:\Recover**
Here the backup files are located enabling you to recover the factory setting (see page 78).

**D:\Driver**
This folder includes the drivers required by your computer (pre-installed).

**D:\Tools**
Here you find additional programs and other documentation for your PC.
Connecting an external hard drive

Your PC has a hard disk bay, which will enable you to connect the external **MEDION HDDrive 2go ultra speed** hard drive simply and without complications via the SATA connector.

As in the case of a USB memory pen, connection takes place with a restarted operating system. The hard drive will be recognized as a replacement storage medium and will be allocated a drive letter automatically.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please take note of the fact that <strong>only</strong> the <strong>MEDION Hard Drive</strong> specified above can be connected to the hard disk bay.</td>
</tr>
</tbody>
</table>

The **HHDrive 2go** (connection via USB) of the first generation can only be connected with a **special** adapter you can buy via our online shop [www.medionshop.co.uk](http://www.medionshop.co.uk).

As soon as you attach the hard disk to the hard disk bay, this is recognized as the removable data carrier of your PC. If you don't access your **MEDION HDDrive 2go ultra speed** for a long period of time (approximately 10 minutes), it goes into the energy savings mode, in order to not bring about the unnecessary consumption of electricity. If the energy savings mode is not switched on, change the settings of your antivirus software.

<table>
<thead>
<tr>
<th>Important!</th>
</tr>
</thead>
<tbody>
<tr>
<td>The plugs are provided with <strong>dust protection caps</strong> to protect the connections. They must be removed before use. The caps must be replaced under all circumstances, if the connections are not used.</td>
</tr>
</tbody>
</table>
The optical drive

Diagram reference: C1

Loading a disc:

Attention!

Do not place protective foils or other stickers on your CD’s. To avoid damage to your drive, do not use deformed or damaged CD’s. Attention: Do not use scratched or dirty disks, discs with pieces broken off or disks of poor quality. Because of the high speeds in the drive the disks might break and damage your data as well as your drive. Examine the disks before you enter them. If damage or dirt is visible, you should not use them. Damage caused by faulty media is excluded from warranty and their repair must be charged.

1. Push the eject button (Diagram reference, C2) on the right of the optical drive to open the tray.
2. Place the disc on the tray so that it lays flat with the label facing upward.
3. Push the eject button again to close the tray.

Note

Many CD’s start automatically when they are inserted. This depends on the operating system and the corresponding settings.
Playing back and retrieving data from discs

Your PC is able to playback and to retrieve Audio CDs, DVD Movies and Data discs.

After loading the disc your operating system will open a selection window with different options for playback.

If your operating system doesn't open the selection window you still have the possibility of the access via the explorer or "My Computer".

How to remove a disc

1. Push the eject button (Diagram reference, C2) at the front of the CD-ROM drive to open the drawer.
2. Remove the disc and store it in the CD cover in a safe place.

Note
Do not try to remove the CD from the drive while the computer is accessing the disk.

The optical drive as boot drive

The optical drives can be used for booting the operating system. If the PC does not start with the disk even though it is "bootable", first try to insert the disk into the other drive (if available) and restart your PC. If even this does not lead to success, this can be connected to the fact that this is not explicitly displayed in the BIOS or the disk is not bootable. If necessary, check this.
Regional playback information for DVD
The playback of DVD movies includes the decoding of MPEG2 videos, digital AC3 audio data and the deciphering of CSS protected contents.
CSS (sometimes called copy guard) is the name of a data protection program incorporated by the movie industry as an action against illegal copies.
Among the numerous regulations for CSS licensees the most important ones are the country specific playback restrictions.
In order to facilitate the geographically restricted release of movies, DVD titles are released for certain regions.
Copyright laws require the restriction of each DVD movie to a certain region (usually the region, in which it is sold).
DVD movie versions can be published in several regions but the CSS regulations require that each CSS decipherable system may only be used in one region.

Attention!
The decoding software included with your PC may be changed for regional DVD decoding up to five times, after which the drive will only play DVD movies for the region setting last entered. Changing the region code after that will require factory resetting which is not covered by warranty. If resetting is desired, shipping and resetting costs will be billed to the user.
Subjects concerning the CD/DVD Rewriter
You receive information on the so-called blank discs. These media, requiring a CD rewriter (burner) to produce CDs are called CD recordable (CD-R) or CD rewritable (CD-RW).

Recordable/Rewritable Discs
Normal Discs are pressed from a digital, glass master and then sealed. In the case of blank disc, the information is burnt onto the disc with the laser of the Rewriter. Therefore these discs are more sensitive than normal CDs.

Please avoid the following when using recordable/rewriteable discs - especially blanks - that have never before been used:
- radiation by direct sunlight (UVA/UVB)
- scratches and damage to the disk surface
- extreme temperatures

LightScribe
Your CD/DVD writer will support the LightScribe technology, according to the version. You will be able to provide the upper side of special CD or DVD media with a richly varied label with the appearance of screen printing, thanks to this new technology. The advantages demonstrate professional printing quality and simple handling in this case.

You need specially coated media to make a LightScribe disk. The corresponding software (Nero Burning ROM) and the installed CD/DVD writer support the LightScribe technology completely.
If your PC is equipped with a card reader (Diagram reference R), you can handle different memory card types. The following table refers to the use of the card reader:

<table>
<thead>
<tr>
<th>Slot</th>
<th>Card type</th>
<th>Contacts</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS</td>
<td>Memory Stick</td>
<td>point to bottom</td>
</tr>
<tr>
<td></td>
<td>Memory Stick Pro</td>
<td></td>
</tr>
<tr>
<td>SD</td>
<td>SD (Secure Digital)</td>
<td></td>
</tr>
<tr>
<td>MC</td>
<td>MMC (MultiMediaCard)</td>
<td></td>
</tr>
<tr>
<td>CF</td>
<td>CF (Compact Flash)</td>
<td>point to front</td>
</tr>
<tr>
<td></td>
<td>IBM® Microdrive</td>
<td></td>
</tr>
<tr>
<td>SM/XD</td>
<td>SmartMedia / XD</td>
<td>point to bottom</td>
</tr>
</tbody>
</table>

**Note**

Your card reader supports several card formats (for example, Memory Stick Pro Duo or Mini-SD. You also need an adapter for them (not included) that fits in one the above-mentioned bays.

If a card is inserted, a free drive will be assigned*.

*only if this concerns a removable disk
The graphics card

Diagram reference: N, P1, P2, P3

Your computer is fitted with a high performance graphics card, one of the most technologically advanced and best-equipped VGA cards available.

Performance characteristics

- High Performance Acceleration
- Interactive Direct3D Acceleration
- Video Acceleration for DirectDraw/DirectVideo, MPEG-1, MPEG-2, DVD and Indeo® Video Technology
- ACPI Power Management

Current image playback frequencies

The graphic card can, depending on the set resolution, display vertical image playback frequencies of between 60 Hz and 240 Hz.

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Colors</th>
<th>Resolution</th>
<th>Colors</th>
</tr>
</thead>
<tbody>
<tr>
<td>640 x 480</td>
<td>8-, 16-, 32bit</td>
<td>1600 x 900</td>
<td>8-, 16-, 32bit</td>
</tr>
<tr>
<td>800 x 600</td>
<td>8-, 16-, 32bit</td>
<td>1600 x 1200</td>
<td>8-, 16-, 32bit</td>
</tr>
<tr>
<td>1024 x 768</td>
<td>8-, 16-, 32bit</td>
<td>1920 x 1080</td>
<td>8-, 16-, 32bit</td>
</tr>
<tr>
<td>1152 x 864</td>
<td>8-, 16-, 32bit</td>
<td>1920 x 1200</td>
<td>8-, 16-, 32bit</td>
</tr>
<tr>
<td>1280 x 960</td>
<td>8-, 16-, 32bit</td>
<td>1920 x 1440</td>
<td>8-, 16-, 32bit</td>
</tr>
<tr>
<td>1280 x 1024</td>
<td>8-, 16-, 32bit</td>
<td>2048 x 1536</td>
<td>8-, 16-, 32bit</td>
</tr>
</tbody>
</table>

You can change the graphics setting using the Display Properties help program. The graphics driver will ensure that it will not be possible to set any resolution unsuitable for the graphics system at the same time. Recommended vertical scanning rates for tubed devices (CRT) are 75 -85 Hz and 60-75 Hz for LCD monitors. Read the Operating Instructions of your monitor as well.
Connecting the PC to a Television

The optional Video outputs (TV-out) are located on the back of your PC. They offer you comprehensive possibilities of transferring the image on your PC to the television.

**Note**

You will need a SCART, S-video, composite or a component cable for connecting your device to the PC according to the equipment. This is not included in the scope of the delivery, but it can be obtained through a specialist shop. Read precisely which cable you need in the Operating Instruction of your TV device.
How to Connect the PC to a Television:

**Note**

To use the TV function you **must first connect** the TV to the graphics card **before starting** up the PC.

1. Shut down Windows and power off the PC.
2. Connect the composite, SCART, S-video or component input on your device to the corresponding output (diagram reference: **P1, P2, P3**) on your PC. Alternatively, if your television set has an appropriate port, you can use the digital HDMI connection (High Definition Multimedia Interface) (**N**) for the transmission of picture and sound signals.
3. Switch on the television to see the PC image on your TV set.
4. Start up the PC and wait for Windows to fully load.
5. In the **Display Properties** program set up the configuration.
6. End configuration by clicking on **OK**.

**Note**

Video **outputs** are only planned for **playback**. Use the video inputs for **recordings**. For **video recording** please use the Video Input (composite or S-Video) connectors at the **front** of your PC.
The sound card

Diagram reference: E, G1, G2
Your PC has an integrated audio sound chip for support for all popular programs and games.

Note

The speaker/headphones output is designed for active speaker systems or headphones. Passive speakers cannot be used or if they are the quality will be significantly reduced.

By using the external connections you have the possibility to connect your notebook with a 7.1 surround system.
You can make the necessary settings for configuring the loudspeakers, etc. by means of the software supplied with the PC.
You open the configuration program, to make user-defined settings, by means of the symbol on the right in the task strip.
IEEE 1394 (Fire Wire)

Diagram reference: K

The IEEE 1394 connector, also known as iLink® or Fire Wire, is a serial bus standard used for rapid digital data exchange.

Application options for IEEE1394

- Connection of digital devices of the entertainment industry, such as set-top speakers, digital video and camcorder, ‘Digital Versatile Disk’ (DVD), television etc.
- Multimedia applications and video processing.
- Input and output devices such as printers, scanners, etc.

Technical specifications

- Depending on the application, the maximum data transfer is about 100, 200 or 400 Mbit/s, corresponding to a data throughput of up to 50 MB per second.
- The device can be plugged in or unplugged during operation (hot plugging).
- The standardised cord (‘Shielded Twisted Pais’ –STP) includes 6 strands. Two lines are live (8V up to 40V, 1.5 A max.) and can be used as an external power supply. The four signal lines transfer data or control information. Some devices do not require a power supply via the cord so that four pole plugs are use.
- The voltage output of the 6-pole IEEE 1394 jack is protected by a fuse (limited power source according to EN60950).

Note

The IEEE 1394 ports located at the front of you PC can only be used separately. A simultaneous use is not possible.
USB port

Diagram reference: L

**Note**

Devices connected directly to the USB bus should not draw more than 500 mA.
The voltage output is protected by a fuse (Limited Power Source according to EN 60950).
Should the devices need more power than this, it will be necessary to provide a hub (distributor / booster).

On the USB it is possible to connect up to 127 devices which correspond to the USB standard (1.1 and 2.0 supported). The data transfer speed is 1.5 Mbit or 12 Mbit, depending on the device connected. USB 2.0 can reach up to 480 Mbit.

**Note**

If possible, connect your USB devices always to the same port were it has been installed. Otherwise you will get a new ID and your operating system asks for a new installation of the driver.
The network

Diagram reference: M
Your PC is provided with a Fast Ethernet-Network connector
You will find further information about networking in the Help section within the Start menu.

What is a network?
A network means connecting your PC to another or several other PCs.
Users can transfer information and data between computers and share resources such as printers, modems and hard disk drives.
Here are some practical examples:
- You can exchange Email and manage appointments in an office.
- Users share a printer in a network and save their data on a central server.
- Share one modem or one ISDN card among computers for Internet access.
- Two or more PCs can be connected to play network games or share data.

Wireless LAN
Your PC is equipped with WLAN. The components (mini-PC Module) are already integrated and activated in your computer if your PC is equipped with this functionality. You can turn off the wireless LAN function with the help of the Windows® Device Manager.
This function allows you to create a wireless network link with a partner.
Safety Notes

Attention!

Don’t use this feature in environments where highly sensitive devices are placed such as in hospitals etc. To avoid any interference disable this option in your device manager.

Conditions

The partner used can be a wireless access point. An access point is a wireless transmitter that communicates with your notebook and controls access to the network connection (e.g., a home network or a broadband connection such as DSL).

Wireless access points are often found in offices, airports, universities or Internet cafés. They offer access to enterprise services and networks or to the Internet. Access authorizations are normally needed. A fee may be required to use a public access point.

To set up a wireless network to share Internet access, files, and printers at home, you will need an access point, a router, and a broadband (DSL or cable) modem. Some access points can also serve as a router and/or a broadband modem. Check with your retailer to find the best solution for your needs.

A link to another computer with wireless LAN functionality can also be created without an access point. This will allow you to share files, but you will need an access point and a router to share an Internet connection.

The wireless network link works according to standard IEEE 802.11g and is compatible to the standard IEEE 802.11b. Other standards (802.11a etc.) are not supported.

If encrypted transmission is used, this must operate according to the same principle on all devices. Encryption is a method of protecting the network from unauthorized access.

The transmission speed (max. 54 Mbp/s) can vary according to distance and other factors. If i.e. the other devices support the 802.11b standard the transmission speed can be max. 11 Mbp/s.
Search for “wireless networking” in Windows Help and Support for more information.

Troubleshooting within the network

Why does the network environment not show the releases?
- The network environment is delayed in time. Check the release by searching for the respective computer name.

Why does an error message appear when I click on the network environment?
- The computer name must be unique on the network and may not be the same as the task group.

It appears that the network boards are unable to communicate. What might be the problem?
- Maybe one of the used network boards works with a different speed (e.g. 10 instead 100 Mbit/s) and your network computer is unable to recognize this. If necessary, set the network driver to the compatible speed.
- If two PCs should be linked you require a cross-link cable, otherwise use a patch cable.
- In addition, check the protocols and the configuration.

The data transmission is incorrect or very slow. What might be the problem?
- Maybe you have the wrong cable (UTP / CAT3 or lower) or the problem is the proximity of a power cord or another source of interference.

For further hints on troubleshooting refer to the Windows help under “Network errors”.
The TV tuner card

Diagram reference: 01, 02

Watch TV

With the Windows XP Media Center Edition, we supply you with the optimal software for digital television, digital photography and digital music.

You can watch television with the inserted TV card through one of the following signal sources:

- DVB-S (through a digital SAT device)
- DVB-T (through a DVB-T receiver)
- Analogue TV (through an indoor antenna or cable)

Changing the Signal Source

In order to change the signal source on your PC, the installation assistant must be recalled. You can find these at:

START ⇒ MEDIA CENTER ⇒ MORE PROGRAMS ⇒ TV SETTINGS

Attention!

Please keep in mind that recording broadcasts can occupy up to 2.4 GB per hour. Save data which you don’t need permanently on external media or swap them to the D:drive.
The Remote Control

Note
This wireless remote control set can only be used to control the Media Center program on your PC. In order for it to work, the following conditions must be met:
- The PC must be booted up.
- Windows® XP must be fully loaded.
- The driver software must be installed *.

* All these conditions are met in the delivered state.

Inserting Batteries
1. Open the battery compartment carefully.
2. Insert two batteries (type: AAA, Micro) in the battery compartment. Ensure that the polarity corresponds to the illustration etched on the inside of the battery compartment (+ must correspond with + and – with –).
3. Close the battery compartment again.
# Button layout

## Note

Ends the playback/recording

Pauses the playback at the selected point.

Direct selection of the TV channels by means of numbers. Number entry in the case of some functions (video text, etc.). Text entry with some functions.
Changing the transmission/reception channels

If several computers with remote controls are set up in close proximity of each other (approx. 10 metres), this can lead to disturbance. This can be remedied by choosing different channels. **Only reset the remote control in case of disturbances.**

Proceed as follows:

1. Start the **Control Panel** and select the option Other Control Panel Options.
2. Choose the menu item **Wireless Remote Settings.**
3. Select the option "**The software may only function with the remote maintenance adjusted on this channel**".
4. Select the new channel (a number between 1 and 16) in and confirm your setting with the **Apply** button.
5. Press and hold the **green Media Center** button until the LED starts flashing.
6. Release the button, the LED stops blinking and the light is on.
7. Now enter the new channel for the remote and confirm with the **green Media Center** button.
8. Press any button on your remote to see the current code.
9. Confirm your settings by using the OK button of the Wireless Remote Settings window.
Parallel interface

Diagram reference: H
You can connect a printer or a device such as a scanner to this 25-pin parallel interface.
The parallel interface supports Standard EPP (Enhanced Parallel Port) and ECP (Extended Capabilities Port).

Serial COM port

Diagram reference: I
The 9-pin serial interface is used as the port for serial devices such as modems, card readers or mice. The interfaces are addressed as COM1 or COM2 and are FIFO 16550-compatible. To use these ports it is necessary, as standard, to have a so-called null-modem cable which is usually supplied with the device to be connected.
Software

This section deals with software, differentiating between BIOS, application programs and operating systems.

Getting to know Windows XP

Windows XP offers different options to understand its operation. We will mention only a few of those options here:

Windows XP help and support
An answer to almost every question can be found in this program. You’ll find it in the Start menu or you can launch it by simply pressing the F1 key.

This help function fully covers the Windows operating system. It is helpful for both beginners and professionals. You can print or bookmark the information, which is categorized into topics. You start like this:

1. Click on Start
2. Select now Help and Support
**Microsoft interactive training**

To obtain an overview over the functions and the operations of Windows XP we **recommend** the program „Windows XP Interactive Training“.

The objective of the program is to ease both the initial contact with and the transition to Windows XP for beginners and experienced users.

The program is categorized into many small topics, so that the user can gain access to the information according to his requirements. Multimedia effects including video clips and speech output convey the contents of the various topics clearly and efficiently.

Interactive tasks allow you to apply the conveyed topics in a simulation environment of the program to facilitate a successful learning experience.

Windows XP Step by Step Interactive covers …

- operating Windows XP
- new functions in Windows XP
- the process of log-on log-off and user administration for creating a security structure
- configuration of the Internet access
- operating the email program
- … and much more!

Use this program to better understand your PC and to operate it optimally. It also is an additional source of information for recognizing and eradicating potential problems. You start the program like this:

1. Click on ![Start](image)

2. Select now ![All Programs](image)

3. The program is located in the folder "Accessories", subfolder “Microsoft Interactive Training”.
**Writing CDs/DVDs**

We describe the writing process with the software **Nero**. Please follow this instruction only if you use this software.

**Note**

A writing process should always take place on its own. Please terminate all running programs (fax reception, screen savers, Power-Management etc.).

**Starting Nero Start Smart**

To start Nero-Express proceed as follows:

1. Click  
2. Now select  
3. The program is located in the “**Nero 7 Essential**” folder.  
4. An interface appears that allows you to easily create different media. Follow the instructions on the screen.

**Note**

For detailed information, read the extensive On-line Help (F1 key).
Installation of software

**Note:** If your operating system is configured that the installation procedure accepts only signed drivers (default) and software this information screen will appear:

![Software Installation](image)

Although the software lacks the digital signature it may work properly. Click on "Tell me why this testing is important" to get detailed information.

Confirm by clicking on "**Continue Anyway**".

The software included in delivery is **already pre-installed** in the factory.

**Attention!**

It happens that during installation procedure important files can be changed or even cancelled. To avoid eventual problems in using older files after installation, make sure to safeguard your hard disk. See page 75 for further information regarding data backup.
This is how to install your software:

Please follow the instruction of the software vendor. We will describe a typical installation. Once you insert a CD, the installation menu is started automatically.

Run the **Program Compatibility Assistant** under **Programs, Accessories**, if you are not sure about the compatibility of the Program to be installed.

**Note**

If the automatic start does not work, it is likely that the so-called Autorun function has been deactivated. Read the respective chapter in Windows Help on how to activate this function.

An example for the manual installation **without** the autorun function:

1. Click on ![Start](Start.png) and select the item ![Run...](Run.png) (or hit ⌘ + R to launch the corresponding dialog).
2. Now enter the letter of the CD-ROM drive followed by a colon and the program name setup:
   ![Run Dialog](Run.png)
3. Click on "OK".
4. Follow the instruction given by the program.
Software uninstallation

In order to remove installed software from your PC, follow the next steps:

1. Click on Start

2. Click on Control Panel

3. Then select the following program:

Add or Remove Programs

4. Select the respective program, start the uninstallation and follow the instructions on the screen.
**Windows activation**

Microsoft is committed to the protection of intellectual property rights and the reduction of software piracy. Therefore Windows XP contains software-based product activation technology. Your copy of Windows XP has already been **activated for your PC**. Product activation is needed if some components of your PC have been replaced or you use a non-authorized BIOS. If necessary you can activate Windows XP as often as requested.

You will probably need to activate Windows XP by telephone even if Internet Activation is available. This is due to the pre-activated SLP version which runs with a special Product-ID. However, activation needs your unique Product ID which can be found on the **Certificate of Authenticity** sticker on your PC housing. When you call, please inform your agent that you are running an OEM-(SLP) version of the software.

**Product activation on your PC**

In few cases it may still be required to activate Windows XP. If an activation via the **internet** is acknowledged with an error message you should perform the following steps.

1. Please select the **telephone activation** and click until the related screen appears.
2. Now click on **Change Product Key**. A new window appears. Enter the product key. This is located on the **Certificate of Authenticity (COA)**, on the computer’s casing.
3. Acknowledge your entry and follow the instructions on the screen. Notify your Microsoft consultant, if necessary, that you have an OEM license.
BIOS setup

In the BIOS set up (your PC’s Basic Configuration) you have a number of parameter settings available for your PC. For example, you can change the operating mode of the interfaces, security features or power management.

The PC is factory pre-set to guarantee optimum operation. Please only modify the parameters if this is absolutely essential and if you are familiar with the configuration possibilities.

Execution of the BIOS setup

You can only execute the configuration program when starting the system. If the PC has already been started exit Windows® and reboot. Prior to rebooting the PC press the key “DEL” and keep it pressed until the message “Entering Setup” appears.
BullGuard Internet Security

The BullGuard Internet Security Package is a combination of the currently most up-to-date PC security technologies on the market and thus offers you 24-hour optimum protection.

BullGuard is already installed, so that additional installation will not be necessary. If you nevertheless have to carry out an installation (e.g. after system restoration), you will find the software package on the application/support disc supplied with the machine.

BullGuard Internet Security consists of the following security components:

- Antivirus software
  For monitoring downloaded and uploaded files
- Firewall*
  For checking your internet and network connection
- Spam filter*
  For protecting against unwanted emails in your postbox
- Backup*
  For protecting your important documents and photos

*Information

The Firewall, Spam filter and Backup components will only be released at the free registration and will be deactivated after the expiry of 90 days.

Procure a BullGuard subscription through the internet link given below, in order to be able to continue to use this module.

The BullGuard Internet Security Package will be updated with the most up-to-date virus information for 90 days after the free registration.

The registration window will only appear after your PC has been restarted. You will register by entering your email address and a password.

The antivirus software will continue to run after the expiry of 90 days, but it will no longer be updated, so that your PC will not be protected against new viruses.
The purchase of various subscriptions through BullGuard is possible in order to always receive the most up-to-date information and updates.

A subscription will be purchased on the internet and carried out without complications. An additional release or the entering of a licence is not necessary. Neither changes nor additional settings will have to be made.

The release will take place automatically after the purchase of a subscription.

Read the information about this on the internet at:

Data and system security

The programs described below are part of your Windows operating system. You will get additional information on these programs in the Windows Help file.
Please also read the notes on page 4.

Data security

Back up data regularly on external media such as a CD-R or CD-RW. Windows offers both a Backup program and a Files and Settings Transfer Wizard.
You will find both programs in Accessories ⇒ System Tools within the Start menu. Make a backup disk with all your passwords and the operating system’s original configuration.

Maintenance programs

You can avoid some hardware and software errors with the help programs such as Disk Defragmenter and Disk Cleanup. The help program System Information can also be helpful since it gives you detailed information about your system configuration.
You will find these programs in Accessories ⇒ System Tools too.

Password reset file

To protect individual user accounts from complications resulting from lost passwords, users should create a password reset disk and keep it in a safe place. If the user should forget his/her password, the password can be reset with the password reset disk so that the user has access again to his/her local user account.
Windows Help describes how to create a password reset file.
System recovery

Windows XP provides a useful function enabling the storage of the so-called Recovery points.

The system remembers the current configuration as a snapshot and returns to this, if necessary. The advantage is that an unsuccessful installation can be cancelled. Recovery points are created automatically by the system, but they can also be set manually.

You can determine and configure yourself the maximum memory taken up by this. You find this program in the program file under Accessories → System Tools.

We recommend setting a recovery point before installing a new software or driver. If the system does not run stable any longer this enables you usually to return to a workable configuration without deleting newly created documents. In the next paragraph read your options for a repair of an incorrect installation.

Correction

Windows XP includes various functions ensuring that the PC as well as the installed applications and devices work correctly.

These functions assist you in solving the problems which might occur by adding, deleting or replacing files required for the functionality of the operating system, the applications and devices. The recovery function or functions you use depend on the type of occurring problem or error. For detailed information refer to the Windows help.

Enter the search word “Repair overview” in order to evaluate which of the following functions is the safest way to correct your problem:

Backup, Recovery of the driver, Deactivation of the device, System recovery, Last function known to work, Secured mode and system recovery, Recovery console, Windows installation CD.

Please refer to the tool.
Windows® Update

Windows Update is the online updating of Windows. Use Windows Update to download elements such as security updates, important updates, the newest help files, drivers and Internet products from the Internet.

The website is regularly augmented by new content, so that you can download the newest updates and error corrections at any time, to protect the Notebook and guarantee its functioning.

Windows Update will search through the Notebook and provide a list of individual updates especially for the configuration of your Notebook.

Each update that Microsoft regards as important for the operation of the operating system, programs or hardware components will be classified as an "important update" and automatically selected for installation for you.

Important updates will be provided to remove known problems and to protect the Notebook against known security risks.

Carry out four simple steps, to download the updates needed and to keep your computer on the current status of technology:

1. Open Windows Update in the Help and Support Center.
2. Click on Search for update.
3. Click on Add to select the desired update and to add it to the updates to be installed, while you are searching through the available updates in each category. You can also read a complete description of each individual element by clicking on the Read further Link.
4. Click on Check and install updates, when you have selected all the desired updates, and then click on Install now.
Windows Update information for data security

Windows Update needs certain information about the respective Notebook, so that a suitable list with updates can be provided for you. This information will include the following:

- Version number of the operating system
- Version number of Internet Explorer
- Version numbers of additional software programs
- Plug & Play identification key of the hardware devices

Windows Update will stand up for the protection of your private data and will not record your name, address, email address or other forms of personal data. The information collected will only be used during the time that you are visiting the website. It will also not be stored.

The update can only be executed via the Internet. Ensure that you are on-line with your PC when downloading the updates.

Restoring the factory settings

Should your system not function correctly, you have the opportunity to recover the original set-up.

Use the included application/support disk to do this. This recovery method offers you several possibilities for system recovery.
**Limits of the recovery**

- Changes made to the original configuration (RAS, Desktop or Internet settings) and installed Software will be ignored by this Recovery and will not be reloaded.
- Driver Updates or hardware installed by you will be ignored by this Recovery.

**Beware!**

All data in drive C (even the file "Documents and Settings" meant for the file folder of the user) will be deleted. If necessary, backup all required data on drive D. (Pay **absolute** attention to the notes on Page 4 and Page 75).

This recovery will always reset your system to its condition at delivery. Printer installations or other additional software must be reinstalled.

**Attention!**

If you delete the directory D:\Recover or the files located there a recovery is no longer possible. For safety reasons you can copy the file FACTORY.GHO and all other FACTO.XXX files to a CD-Recordable.

**Carrying out a restore**

1. First, please read the entire Restore section of the Windows Help file.
2. Insert the Support Disc and reboot the PC.
3. Select the option **Boot from CD-ROM**.
4. Follow the on-screen instructions.

The PC restarts to its original factory settings.
FAQ – Frequently Asked Questions

When do I have to activate Windows?
Your software has been preactivated in the factory. An activation will only be required, if...
... several components are replaced by others.
... you install a new motherboard.
... a different BIOS version has been installed.
... you install the software to another computer.

What is the Windows activation?
Your operating instructions include a chapter about this subject.

How do I perform a data backup?
Use the program Backup for this. It is important that you follow the operating instructions of this program.
You will find the program under:

Start ➔ All programs ➔ Accessories ➔ System Tools ➔ Backup

Make a backup and another backup of selected data to an external medium (CD-R), to familiarise yourself with the technique.
A backup is unsuitable if you are not able to recover the data, the medium (CD-R, CD-RW) is defective or no longer available.
Do I still have to install the enclosed CDs/DVDs?

No. Basically all programs are already preinstalled. The disks are only intended as backup copies.

When is the recovery of the factory setting recommended?

This method should be chosen as the last resort. Read chapter "System recovery" on page 76 concerning the alternatives possible.

Why is the boot partition missing when booting from the support/application CD?

The first partition is formatted with the file system NTFS. Compared to FAT32 this file system offers more security and a more efficient access. However, NTFS partitions can only be read from operating systems supporting this. This is not the case in the aforementioned CD.
Customer service

Troubleshooting
Errors can have simple causes, but sometimes they are caused by faulty equipment. We would like to give you some ideas to solve common problems. Should these instructions not lead to success, please feel free to call us.

Localise the cause
Visibly check all cables and connections. Should all lights be off, check whether all equipment is supplied with power.
- Check power points, power cable and all power switches.
- Switch off the PC and check all cable connections. Check the connections to peripherals. Do not exchange cables, even though they may look similar. The polarity in those cables may be different. When it is confirmed that the computer has power and all connections are correct, turn the computer on again.

Frequent use of the programs Disk Defragmenter and Disk Cleanup will help you to avoid problems with your operating system.

The tool "System Information", available in the program folder "System Tools" is also very useful.
Errors and possible causes

The monitor is blank.
- Confirm that the system is not in stand-by mode. Press any key on the keyboard to test this out.

Wrong Date and Time.
- Double-click the clock on the taskbar and correct the date and time.

After a system restart a new drive letter is assigned to the cards in the card slots.
- This can happen, when the card reader re-initializes the slots during a system start. New IDs might be assigned, which can lead to new drive letters for some cards.

No data can be accessed from the optical drive.
- Check whether the disc is inserted correctly.
- Is the optical drive displayed in Windows Explorer? If so, test another disc.

The mouse does not work.
- Check the cable.
- Does your mouse work with other programs? Is your mouse activated?
- Also read the tips starting from page 18.

There is not enough room on the HDD.
- Audio and video recording require a lot of storage capacity (up to 2.4 GB / hour). Back up unnecessary files of "My Documents" onto CD-R's, Back up unnecessary files of "My Documents" onto CD-R’s, DVDs or other external media (for example, the MEDION HDDrive 2go or ultra speed).

The PC does not start up.
- If all cable connections are correct, then try to reset the power supply of the PC. Set the power switch at the rear of the PC to position 0 (OFF). Now press down the main switch at the front of the PC for 10 seconds. Wait 5 more seconds and the restart the PC.
Additional support

If the suggestions in the above section have not solved your problem, please contact the service hotline and we will attempt to help you solve the problem.

Before you contact the Technology Centre, however, please have the following information available:

• How is your computer configured?
• What additional peripherals do you use?
• What messages, if any, appear on your screen?
• What software were you using when the error occurred?
• What steps have you already undertaken to solve the problem?
• Have you upgraded or removed drivers or hardware?
• Can you manually repeat the problem?
• If you have been given a customer number previously, please quote this.

Driver support

This PC has been extensively tested in our laboratories with a large number of compatible devices. It fulfils all required standards and complies with the standard “Designed for Windows”, which certifies utmost compatibility.

However, often the software drivers for individual components are updated from time to time. This is a regular process provided by the manufactured to mend possible compatibility problems that may occur with components (e.g., programs or hardware) that were not tested at the time of your PC’s manufacture. Driver updates and the latest information on your product are available on the Internet.

Visit Medion on the Web at www.medion.com
Transporting the PC

Please observe the following guidelines when transporting the PC:

- To avoid damage during transport, store the PC in its original packaging.

Cleaning and care

The lifetime of the PC can be extended by taking the following measures:

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are <strong>no user-serviceable</strong> or user-cleanable parts inside the PC housing.</td>
</tr>
</tbody>
</table>

- Before cleaning, **always remove the power** plug and all connecting cables. Clean the PC with a damp, lint-free cloth.
- Dust can close the fan openings, which can lead to overheating and incorrect functions. Make sure that the fan openings guarantee an adequate air circulation at regular intervals (approx. every 3 months). Use a vacuum cleaner to release the fan openings from dust. We also recommend cleaning inside the computer housing by a specialist, if your device regularly attracts dust.
- **Do not use any solvents, corrosive or gaseous** cleaning agents.
- **Do not use CD-ROM cleaning disks** or similar products that clean the lens of the laser to clean your CD- /DVD-drive.
Recycling and disposal

Device

At the end of its life, the appliance must not be disposed of in household rubbish. Enquire about the options for environmentally-friendly disposal.

Batteries

Do not dispose of used batteries in the household rubbish! They must be deposited at a collection point for used batteries.

Packaging

To avoid damage during transport, the PC is stored in a packaging. Packaging is produced mostly from materials which can be disposed of in an environmentally friendly manner and be professionally recycled.

Should you have any questions concerning the disposal please contact your dealer or our service.

Battery treatment

Batteries may contain combustible materials. By misuse, this may cause battery leakage, heat, explosion or ignition, bringing about injury or damage to the device.

Please observe strictly the following matters:

- **Keep children away** from batteries. If by any chance, the batteries are swallowed, consult a doctor immediately.
- **Do not charge** batteries (except rechargeable batteries).
- **Do not forcibly discharge** batteries.
- **Do not short-circuit** batteries.
- **Do not heat** or **dispose of in fire**.
- **Do not disassemble** or **deform** batteries. Your hands and fingers may be injured, or the liquid of the battery may get into your eyes or adhere to your skin. If
this happens, rinse with a large quantity of water immediately and consult a doctor.

- **Do not** expose batteries to **strong impact** by dropping or throwing the batteries.

- **Do not reverse** the positive (+) and negative (-) **terminals** to avoid short-circuit.

- **Do not mix** used and new or different types of batteries together. Your equipment may not operate properly. In addition, the battery exhausted first may be excessively drained (over-discharged).

- **Remove promptly** the **used batteries** from the device.

- **Replace all batteries** with new batteries of the same type at the same time.

- **Insulate the terminal** parts with tape or the like at the **storage or disposal** of the batteries.

- **Do not throw** rundown batteries in the domestic refuses! Respect the environment and throw them in the specific containers for separate collection. If necessary, turn to your reseller or to our service assistance. Thank you!
Upgrades and repairs

- Only a qualified engineer should perform upgrades and repairs to your PC.
- If you do not have the necessary qualifications, go to an appropriate Service Engineer. Please contact our Service Centre if you are experiencing technical problems with your PC.

Notes for service engineers

- Before opening the housing, disconnect the PC from all power sources and remove any connecting cables. If the PC has not been disconnected from the power outlet before being opened, there is a danger to life through electric shock. There is also a risk of damage to the components.
- Internal components of the PC may be damaged by electrostatic discharge (ESD). Carry out system upgrades and changes in an ESD-protected workshop. If no such workshop is available, wear an antistatic wrist strap or touch a highly conductive metal object. Medion can repair damage sustained by inappropriate handling for a fee.
- Use only original spare parts.

Caution!

There is a lithium battery on the motherboard. This may not be recharged. Lithium batteries can not handle intense pressure, high temperatures or fire. Danger of explosion if replaced incorrectly. Replace batteries with a compatible type (CR 2032) as recommended by the manufacturer. Lithium batteries are hazardous waste and require proper disposal. Contact the Service Centre for additional information on battery disposal.
Notes on Laser Radiation:

- Laser devices of Laser Class 1 to Laser Class 3b may be used in the PC. Where the PC housing remains closed, the device meets the requirements of **Laser Class 1**.
- By opening the PC housing you will gain access to laser devices of up to Laser Class 3b.

When removing and/or opening laser devices, the following guidelines must be observed:

- The CD-ROM-/CDRW-/DVD-drives installed contain **no user-serviceable** parts.
- Only the **manufacturer** should perform repairs to the CD-ROM-/CDRW-/DVD-drives.
- **Do not look into the laser beam**, even while wearing optical protection.
- **Do not allow yourself to be exposed to the laser beam.** Avoid exposure of the eyes or skin to direct or stray radiation.

Standards

This PC meets the requirements of the following standards:

**Electromagnetic compatibility**
This PC meets the following requirements for standards of electromagnetic compatibility and electrical safety:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN 55022</td>
<td>Information technology equipment - Radio disturbance characteristics - Limits and methods of measurement.</td>
</tr>
<tr>
<td>EN 55024</td>
<td>Information technology equipment - Immunity characteristics - Limits and methods of measurement.</td>
</tr>
<tr>
<td>EN 61000-3-2</td>
<td>Limits - Limits for harmonic current emissions (equipment input current up to and including 16 A per phase).</td>
</tr>
<tr>
<td>EN 61000-3-3</td>
<td>Limits - Limitation of voltage fluctuations and flicker in low-voltage supply systems for equipment with a rated current up to 16 A.</td>
</tr>
</tbody>
</table>

**Electrical safety**
Electrical safety requirements according to the following standards:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN 60950-1</td>
<td>Safety of information technology equipment.</td>
</tr>
</tbody>
</table>
**Ergonomics**

Ergonomic requirements according to the following standards:

<table>
<thead>

**Information about the regulatory compliance according to R&TTE**

The following remote equipments may have been supplied with this PC:

- Mouse
- Keyboard
- Remote Control
- Wireless LAN

MEDION AG declares herewith that these devices are in agreement with the fundamental requirements and the other relevant terms of the 1999/5/EG Guideline. Complete declarations of conformity are available under [www.medion.com/conformity](http://www.medion.com/conformity).
FCC compliance statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. Shielded interface cables, if any, must be used in order to comply with the emission limits.
Warranty

The receipt serves as proof of first purchase and should be kept in a safe place. Your legal rights are not limited by these warranty conditions. It is required should you need to make use of the guarantee.

We guarantee that this equipment is in perfect working order. Upon production of the receipt, the remaining period of guarantee shall pass on from the original parts to the respective replacement parts. If you hand in this equipment to make use of the guarantee, you must remove all programs, data and removable storage media. Products which are sent without accessories will be replaced without accessories. The warranty obligation does not apply in the case of the problem being caused by an accident, a catastrophe, vandalism, misuse, incorrect use, ignoring the safety and maintenance regulations, changes by software, viruses or another piece of equipment or accessories or by other modifications not approved by ourselves. This limited guarantee declaration replaces all other guarantees of express or implied nature. This includes the guarantee of saleability or the suitability for a certain purpose but is not limited to this. In some countries the exclusion of implied guarantees is not permissible upon principle. In this case the validity of all express and implied guarantees is limited to the guarantee period. Once this period has expired, all guarantees become invalid. In some countries limiting the period of validity for implied guarantees is not permitted, so that the above limitation does not come into force. If you have any questions with regard to these guarantee conditions, please contact us.
**Liability limitations**

The contents of this manual are subject to unannounced changes caused by technical progress. Manufacturer and sales shall not be responsible for any damages which have been caused as a result of omissions or errors in the information provided in this manual. Under no circumstances shall we be liable for any of the following:

3. Claims made against you by third parties based on loss or damage.
4. Loss or damage to your blanks, recordings or data.
5. Economic follow-on damage (including lost profit or savings) or associated damage even in the case that we have been informed of the possibilities of this type of damage.

In some countries the exclusion or limitation of accompanying or follow-on damage is not legally accepted so that the above limitations do not come into force.

**Making copies of this manual**

This manual contains information protected by law. All rights reserved. Duplicating this information in mechanical, electronic, or any other form, without the written approval by the manufacturer, is prohibited by copyright law.
