

# Multimedia PC

## What your 2 years warranty means

Great care has gone into the manufacture of this product and it should therefore provide you with years of good service when used properly. In the event of product failure within its intended use over the course of the first two years after the date of purchase, we will rectify the problem as quickly as possible once it has been brought to our attention. In the unlikely event of such an occurrence, or if you require any information about the product please contact us via our after sales support service, details of which can be found in this manual and on the product itself.

# Notes on this Manual

Keep these instructions with your computer at all times. The proper set up, use and care can help extend the life of your computer. In the event that you transfer ownership of this computer, please provide these instructions to the new owner. This manual is divided into sections to help you locate the information you require. Along with the Table of Contents at the beginning of this manual, an Index has been provided to help you find topical information.

If you want to start up your PC immediately, please read the chapters **Operational Safety** (page 3) and **Setting up and Getting Started** (page 8).

We strongly recommend you read this entire manual to ensure the proper set-up and operation of your PC. Many application programs incorporate extensive help functions. As a general rule, you can access help functions by pressing F1 on the keyboard. These help functions will be available to you while you are using the Microsoft Windows® operating system or the respective application program.

Windows Vista® offers you additional aids to learn about the new version of Windows and your PC. You can find this information in the **Welcome Center** after booting up your PC. We have listed further useful sources of information starting on page 53.

## Audience

These instructions are intended for both the novice and advanced user. Regardless of the possible professional utilisation, this PC is designed for day-to-day household use. The functions and applications for use with this PC have been designed with the entire family in mind.

## Purchase Details

Enter your purchase details below for quick reference.

Serial Numbers .....  
(i.e. Microsoft®) .....  
Place and date of Purchase .....

You will find the PC serial number on the rear of the PC. Also copy this number into your warranty documents, if necessary.

## Quality

Medion has selected the components in this computer for their high level of functionality, ease of use, safety and reliability. Through balanced hardware and software design we are able to provide you with an innovative personal computer useful for applications relating to both work and leisure. We are pleased to welcome you as our newest customer. **Thank you for choosing our products.**

# Chapter 1

## Safety

Subject	Page
Operational Safety .....	3
Data Security .....	4

# Operational Safety

Please read this chapter carefully and observe all listed notes.

This ensures a reliable operation and long life expectancy of your PC.

- Do not allow children to play unattended with electrical equipment. Children are incapable of judging potential risks properly.
- Keep the packing materials, such as plastic sheeting away from children. The danger of suffocation could arise in the case of misuse.
- Do not open the PC casing or use the PC with the casing removed. When the casing is open there is a danger to life from electric shock.
- Optical drives are Laser Class 1 devices. These lasers must remain in their sealed PC casing. Do not remove the drive covers, as exposure to the lasers may prove harmful.
- Do not insert objects through the slots and openings of the PC. This may lead to electric shock, electrical short-circuit or fire that will damage your PC.
- Do not cover the slots and openings in the PC casing. These openings are for ventilation purposes. Covering these vents may lead to overheating. Please keep free a minimum distance of 20 cm on all sides when setting up the PC.

**Switch off your PC immediately** or do not switch it on at all and contact customer service ...

- ... if the power cord or the connectors attached to it are burnt or damaged. Replace the defective power cord with an original power cord. Under no circumstances may a defective power cord be repaired.
- ... if the housing of the PC is damaged or fluids have leaked into it. Have the PC checked by customer service first, because the PC may not be safely operated otherwise and there may be a life-threatening risk of electrocution!

## Data Security

### Attention!

Every time you update your data make back-up copies on an external storage medium. The supplier does not assume liability for data loss or damage to data storage units, and **no claims can be accepted** for damages resulting from the loss of data or consequential losses.

# Chapter 2

---

## Setting Up & Getting Started

Subject	Page
Included with your PC .....	7
Setting Up .....	8
Connecting .....	11
Getting Started .....	23

# Included with your PC

Please check that the contents listed below are supplied with your package and notify us within 14 days of purchase if this is not the case. You MUST provide your PC's serial number when contacting a customer service representative.

Your PC bundle should include the following components:

- PC and power cord
- Wireless keyboard and mouse set containing of:
  - Wireless keyboard +  
2 batteries type Micro LR03/AAA, 1,5V
  - Wireless mouse +  
2 batteries type Mignon LR6/AA, 1,5V
  - USB receiver
- Remote control type OR24E +  
2 batteries type Micro LR03/AAA, 1,5V
- OEM Version of Operating System
- Application-/ Support Disc
- Documentation

# Setting Up

Remember that choosing the proper location for your PC is just as important as connecting it correctly.

## Set-up Location

- Keep your PC and all units connected to it away from moisture, dust, heat and direct sunlight. Failure to observe these instructions can lead to malfunctions or damage to the PC.
- To prevent damage to your PC from a fall, place and operate the PC and all connected units on a stable, balanced and vibration-free surface.
- Your PC is not suitable for use at video workstation devices in the sense of §2 of the video workstation regulation.

## Ambient Temperature

- The PC can be operated at an ambient temperature of between 10° and 35°C (+41° and +95°F) and at a relative humidity of between 30% and 70% (without condensation).
- When powered off, the PC can be stored at temperatures between -20° and 50°C (-40° and +158°F).
- Unplug the cable during thunderstorms and make especially sure to remove the antenna cables, if present. We recommend the use of a surge protector for additional safety, in order to protect your PC from being damaged by power peaks or lightning strikes through the power network.
- Delay operating a PC after transport until the device has adjusted to the ambient temperature. In situations of large temperature or humidity differences condensation may build up moisture inside the PC, which might cause an electrical short circuit.

# Ergonomics

## Note

Ensure that the monitor is set up in such a way that **reflections, glare and light/darkness contrast** are avoided.

You should not position the monitor in close proximity to a window as this is usually the brightest area of the room and may cause visual impairments during daylight hours.

Always position the monitor in a line of sight that runs parallel to the window front (see picture).

You should also apply a parallel line of sight with respect to artificial lighting. This means that in a room lit by artificial light essentially the same criteria and objectives apply. Should it not be possible to arrange the monitor as outlined above, the following measures might be helpful:

- Turn, lower or incline the monitor.
- Place horizontal or vertical shades at the windows.
- Working in Comfort

## Note

Take regular breaks from the work at your screen to prevent tenseness and exhaustion.

Sitting in one position for long periods can be uncomfortable. To minimize the potential for physical discomfort or injury, it's important that you maintain proper posture.

## Overall:

Change your position frequently and take regular breaks to avoid fatigue.

**Back:**

While sitting at your work surface, make sure your back is supported by the chair's backrest in erect position or angled slightly backwards.

**Legs:**

Your thighs should be horizontal or angled slightly downward. Your lower legs should be near a right angle to your thighs. Your feet should rest flat on the floor. If necessary, use a footrest, but double check that you have your seat height adjusted correctly before getting a footrest.

**Arms:**

Your arms should be relaxed and loose, elbows close to your sides, with forearms and hands approximately parallel to the floor.

**Wrists:**

Your wrists should be as straight as possible while using the keyboard, mouse or trackball. They should not be bent sideways, or more than 10 degrees up or down.

**Head:**

Your head should be upright or tilted slightly forward. Avoid working with your head or neck twisted.

- Hand rest:  
2" – 4"
- Viewing distance:  
20" – 27.5"
- Legroom (vertical):  
minimum 25.5"
- Legroom (horizontal): minimum  
23.6"
- Top line of screen at eye level or  
slightly below.

# Connecting

**For a better guidance, open up the left inner page of the cover with the diagrams to find the location of the described connections.**

## Note:

The devices listed are not necessarily included with your PC.  
All the **connections** listed are **optional** and will not inevitably be available on your PC.

## Cabling

Please follow the instructions below in order to correctly connect your PC:

- Arrange cables in such a way that no one can tread on or trip over them.
- Do not place objects on the cables.
- To avoid damage to your PC, connect your peripherals (e.g., keyboard, mouse and monitor) whilst your PC is powered off. Some devices can be connected whilst your PC is in use. These devices usually have a USB connector. Please follow the appropriate instructions for each device.
- Keep the PC at least one meter (approximately three feet) away from high frequency and magnetic interference sources (e.g., televisions, loudspeaker cabinets, mobile telephones, etc.) in order to avoid malfunctions and/or loss of data.
- Please note that only shielded cables shorter than 3 metres (9.84 ft) should be used for the external interfaces. Please only use doubly shielded cable in the case of printer cables.
- Do not replace the cables supplied with the machine by any others. Use the cables belonging to the scope of the delivery exclusively, because they will have been tested extensively in our laboratories.
- Also only use the connection cable supplied with the devices for the connection of your peripheral devices.
- Make sure that all connection cables have been connected to the peripheral devices associated with them, in order to avoid disruptive radiation. Remove unneeded cables.
- The connection of devices is limited to equipment that complies with EN60950 "Safety of information technology equipment" or EN60065 "Audio, video and similar electronic apparatus. Safety requirements".

- In the first hours of operation, new devices may emit a typical, unavoidable but completely harmless smell, which will decline increasingly in the course of time. We recommend you to ventilate the room regularly, in order to counteract the formation of the smell. During the development of this product, we have made sure that the applicable limits are clearly fallen below.

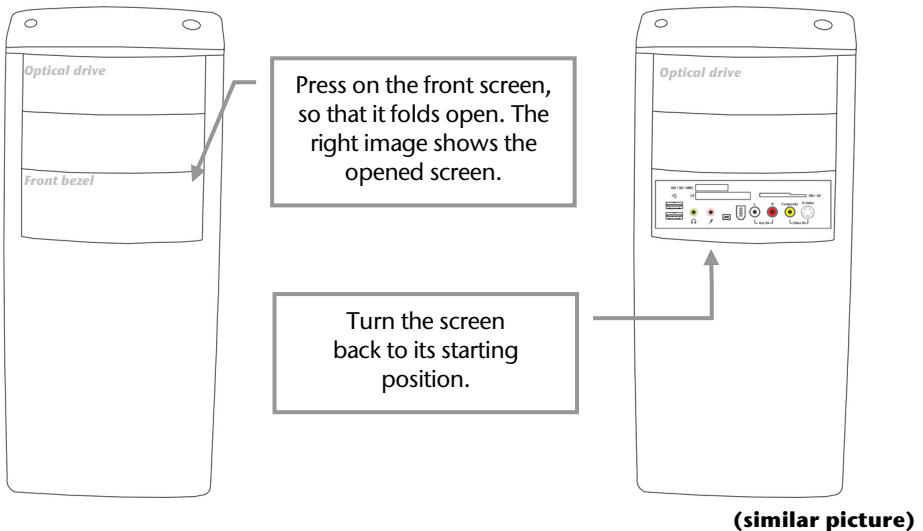

### Note

You only need to connect those components to your computer you require. If you do not have the described device (e. g. printer) you may skip the respective item and carry it out later, if necessary.

## Front Connectors

Diagram reference: **D**

Some connections are located behind the front flap. This offers you the great advantage of creating frequently used connections quickly and conveniently, without turning the PC round. The flap, which can be slid, also protects the connections.

## Connecting Speakers/Audio Output

Diagram reference: **E**

Here you can connect your **active speakers** for replaying or **audio connection cables** for recording. Please refer to the user's guide of your stereo installation for information about which connector you should use (usually **Line In** or **Aux**).

1. Connect the cable with the **3.5 mm stereo** jack plug into the green socket on the rear of your PC.

## PCs with Surround Sound

Diagram reference: **E**

Connect your surround equipment as follows:

1. Connect the **Front** speaker to the green socket.
2. Attach the back loudspeakers to the connector **back surround**.
3. Your centre speaker or subwoofer can be connected to the socket **centre/bass**.
4. Connect to the **side surround** socket two more speakers for the rear surround.

A **digital audio output (SPDIF)** can be connected to an optical and/or a coaxial cable.

Diagram reference: **F1, F2**

1. Plug the optical cable to the socket at Position **F1** or the Cinch cable to the socket at Position **F2**.
2. Connect the other end of the cable to an audio device with a corresponding digital input.

## Connecting a Sound Source/Audio Input

Diagram reference: **G1, G2**

This port is used to accommodate a connecting cable for external **analogue** audio sources (i.e. stereo system, keyboard/synthesizer).

1. Connect the cable with the **3.5 mm stereo** jack plug to the light-blue coloured socket. Optionally, you can connect a stereo Cinch cable (position **G2**).

## LAN Connection

Diagram reference: **H**

Your PC is equipped with a network connection, in order to prepare it for network operation.

The network cable usually has two **RJ45** plugs so that it is not important which plug is connected to which jack.

1. Connect the one plug of the cable to the PC jack.
2. Connect the other plug to the other PC or hub/switch.

For further information refer to chapter “**The Network**” starting at page 45.

## Connecting IEEE 1394 Devices

Diagram reference: **I**

### Warning!

Connect your IEEE 1394 devices **after initial set-up** of your new PC. This will prevent unnecessary confusion during installation. These devices can generally be connected during operation. Read the manual for your peripheral device first.

### Note

Peripheral devices can have different connecting cables (6-pole, 4-pole ). Please check what kind of cable you need for your peripheral device.

### Note

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. Connect the IEEE 1394 cable to the IEEE 1394 port (reference **I**).

### Important

The connectors of the front side are not configured for parallel use.

## Connecting USB Devices

Diagram reference: J

### Warning!

Connect your USB devices **after initial set-up** of your new PC. This will prevent unnecessary confusion during installation. These devices can generally be connected during operation. Read the manual for your peripheral device first.

- The voltage outputs of your PC for USB are protected by a fuse (limited power source according to EN60950). This ensures that a malfunction of the PC will not damage the peripheral devices connected to the respective jacks.

You have a choice of several connection sockets. It does not matter which you use.

### Note

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. If you wish to use a **printer, scanner** or other device with a USB port, connect the cable to the USB socket on your PC.

### Note

Connect your devices always to the same port otherwise your operating system will give a new ID and asks for driver installation.

## Installing wireless keyboard & mouse

The wireless keyboard and mouse operate with digital radio technology to ensure seamless communication between the keyboard, the mouse and your computer.

### **Beware!**

Please read and follow the security advices concerning the use of batteries on page 73.

## Inserting batteries in keyboard

The keyboard requires two alkaline batteries (AAA).

1. Remove the battery compartment cover on the bottom of the keyboard.
2. Insert two AAA batteries. The illustration on the cover shows how to insert the batteries properly.
3. Recover the battery compartment.

### **Note**

If the battery status indicator on the keyboard lights up, exchange the batteries and possibly conduct a frequency control.

## Inserting batteries in mouse

The mouse requires two alkaline batteries (AA).

1. Push the lock of the battery compartment on the under-side of the mouse in the direction of the arrow.
2. Lift the battery compartment cover gently, while holding the lock of the battery compartment in the direction of the arrow.
3. Release the lock of the battery compartment and remove the battery compartment cover carefully. Pay attention that you do not break off or damage either of the resistance hooks on the battery compartment cover.
4. Insert two AA batteries. Ensure that the polarity corresponds to the illustration (+ must correspond with + and – with –).
5. Replace the battery compartment cover.

## Connecting the receiver

Diagram reference: **J**

1. Attach the receiving station for the mouse and keyboard to the USB port on your PC.
2. Set up the receiver with a minimum distance of 20 cm from other electrical appliances (e.g. monitor) in order to obtain optimal results. The distance between the receiving station and transmitters (keyboard and mouse) should not exceed 1.50 m. Do not place the receiver on metal surfaces.

### Note

Change the batteries if it is no longer possible to make entries smoothly. The operation of the mouse and the keyboard is described on page 29 and 30.

## Setting the frequency

1. Press the automatic frequency control on the receiver.
2. Within **15 seconds**, press the automatic frequency control key at the bottom of the mouse with a pointed object (ball-point pen or the like).
3. Move the mouse. If the LED on the receiver lights up and the mouse pointer (if available) moves, the control has taken place. If this is not the case, repeat Steps 1-3.
4. Press the automatic frequency control on the receiver.
5. Within **15 seconds**, press the automatic frequency control key under the right folding feet of the keyboard.
6. Press the space bar on the keyboard. If an LED on the receiver lights up, the control has taken place. If not, repeat steps 4-5.
7. The devices are now coordinated with one another. If several equipment sets are operated at the same time and, because of this, there is mutual interference, repeat Steps 1-6 until the interference is remedied.

## Connecting Serial Devices

Diagram reference: **K**

You can connect an external modem or another serial device using this port.

### Note

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. In order to connect an external modem, card reader or other serial device, connect the serial cable with the turquoise-coloured connection socket (**K**) on the rear of your PC.
2. Hand-tighten the screws of the serial cable.

## Connecting PS/2 Devices

Diagram reference: **L**

You can omit this step if you want to connect a USB mouse or a USB keyboard.

1. Connect the mouse cable to the right, green PS/2 port.
2. Connect the keyboard to the left, blue PS/2 port.

## TV-out

Diagram reference: **N, M1, M2, M3**

You can attach a television set to the video exit (TV-out) and transfer it to your computer display. You will be able to use a SCART cable (**M1**), a composite cable (Cinch, **M2**), an S-video cable (**M2**) or a component cable (**M3**).

Alternatively, if your television set has an appropriate port, you can use the digital HDMI connection (High Definition Multimedia Interface) (**N**) for the transmission of picture and sound signals.

### Note

The video output can only be used for replaying.

1. Connect your PC and your television with the cord required for your TV.

## Connecting the Monitor

Diagram reference: **N**

Your PC is equipped with a **VGA**, **DVI** and a **HDMI** connector.

### Note

Always only connect one data cable, in order to avoid problems with the signal allocation, if your monitor has several inputs (e.g. VGA and HDMI).

### Note

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. Connect the data cable of the monitor to the socket on the graphics card (reference **N**). If necessary, remove the white guard-ring on the monitor plug and ensure that the plug and socket mate together precisely.
2. Hand-tighten the screws on the monitor cable.

### Caution!

Your PC monitor is preconfigured for a screen resolution of **1024 x 768** pixels and an optimal refresh rate of **60 hz**. If your monitor does not support these settings it may become damaged or malfunction during use. You can change the screen resolution and configuration of your monitor as follows (See also your monitor's User Manual).

You will change the screen resolution in the **Control Panel** under **Personalize appearance and sounds**.

The Program can be started in the following way:

- Right mouse click on the Windows interface (Desktop) and a left mouse click on **Personalization**.

**or**

- Through **Start** ⇒ **Control Panel** ⇒ **Personalize appearance and sounds**, by double clicking with the left mouse button.

## Antenna Connection for TV

### Analogue TV reception

Diagram reference: **O**

1. Connect a terrestrial aerial or cable television to the TV socket (**O**) of your TV card.

### DVB-T TV reception

Diagram reference: **O**

You will have the possibility of using these services by means of a corresponding aerial (not included in the scope of delivery), if DVB-T or digital services are offered at your location.

1. Connect a DVB-T aerial to the TV socket (**O**) of your TV card.

## Connecting headphones

Diagram reference: **R**

Here you connect **headphones/earphones**.

1. Connect the cable with the **3.5 mm stereo** jack plug in the green socket at the front of your PC (diagram reference **R**).

### Caution!

The use of headphones/earphones with a high volume can lead to lasting damage to your hearing. Set the volume to the lowest level before reproducing any sound. Start the sound reproduction and increase the volume to the level that is comfortable for you. Changing the basic settings of the equalizer can also cause damage to the hearing of the listener.

It can cause damage to the hearing ability of the listener if a device is operated through earphones with an increased volume for a long period.

## Connecting a Microphone

Diagram reference: **S**

1. You can use the pink socket **S** to connect a microphone with a **3.5 mm** mono jack plug.
2. Position the microphone in such a way that it does not point directly at the speakers. If you hear feedback, characterised by loud whistling noises, reposition the microphone until the sound stops.

## Connecting a Recording Source / Video Inlet

Diagram reference: **G2, T**

You can connect an external video source to your PC using an S-Video or composite (cinch) cable. These connections enable you to record and, if necessary, edit video data.

1. Connect a composite (cinch) or an S-Video cable to the socket **J**.
2. Use the audio input on the front panel (socket **G2**) to feed in the audio signal.

## Connecting S-ATA devices

Diagram reference: **U**

eSATA stands for "**e**xternal **S**erial **A**TA" and is used for connecting external hard disks. Unlike common USB standards, the transmission speed of an e-SATA connection is higher than that of external USB hard disks.

### Note

Take care that the connector and the socket fit exactly to avoid damaging the contacts. Because of its asymmetric form the plug only fits into the socket in one position.

1. Connect the cable to the eSata socket in the front of your PC.

## Remove S-ATA devices

1. Before removing an S-ATA hard disk from your PC, click on the icon "**Safely remove hardware**" in the task bar and then on the hard disk to be removed.

## Connecting the Power Supply

Diagram reference: **P**

Finally, connect the power supply to your PC and monitor.

1. Plug the main connection cable into the plug socket and connect it with the main cable connection (**P**) of your PC.

Observe the following **safety precautions**:

### Please note

Even with the power switch switched off some parts of the device receive current. **You must unplug the power plug** from the socket, if you want to interrupt the power supply to your PC or **cut off your device from current** entirely.

- The power socket must be in the vicinity of the PC and within reach of the power cables. Do not stretch the power cables tightly to reach a power socket.
- Only operate the PC on grounded plugs of the domestic power net.
- Use only the supplied power cord.
- To provide additional protection against electric shock, power surges, lightning strikes, or other electrical damage to your PC, we recommend the use of a surge protector.
- If you are using an extension cord, ensure that the cord meets your local safety requirements. If in doubt, ask an electrician.
- The power supply unit has an On/Off switch that can be used to power off the PC. When the switch is Off (0) no power is being consumed.

### **Do not start your PC yet!**

First, read the following section to find out what you need to know in order to get started.

# Getting Started

The software on this PC comes **fully pre-installed**. You do not have to load any of the CD's/DVD's supplied. With many programs (e.g., telephone-CD's or encyclopaedias), however, it is necessary to insert the corresponding CD/DVD in order to call up the data which is stored on it. The software will ask you to do this as necessary. Once you have made all the connections and secured the necessary connectors you can turn on the monitor, the other peripherals and finally the PC itself.

## Step 1: Power On

1. Power on the monitor and your peripherals.

### Switch

Diagram reference: **P**

2. Provide power to your PC by pressing the switch to position **[I]**. (You will stop the flow of current to the PC by pressing the switch to position **[O]**)

### On/off Switch

Diagram reference: **A**

3. Press the On/off switch briefly to start loading the operating system.

You can program the function of the main switch in the power management of Windows\* (please refer to on-line help). The PC will always be switched off, if the main switch is pressed for more than 4 seconds.

#### Warning!

If the operating system is not shut down properly (through  ⇒ **Shut Down**), then there is a risk of data loss.

## Step 2: Starting Initial Setup

The PC starts and now goes through a number of phases:

### Note

Ensure that there is no bootable CD (e.g. the Recovery-CD) in the CD-ROM drive. Such disks will prevent the operating system from loading directly off the hard drive.

The **operating system** is loaded from the hard disk. During the initial set-up, the loading process takes slightly longer than normal to register the operating system and the individual components completely. Your operating system is finished loading when a welcome screen is shown on your display.

Follow the instructions on the screen. Dialogue boxes will explain any steps that need to be taken. The greeting procedure will guide you through the following screens and dialogues.

Should you have any questions just click on .

### License agreement

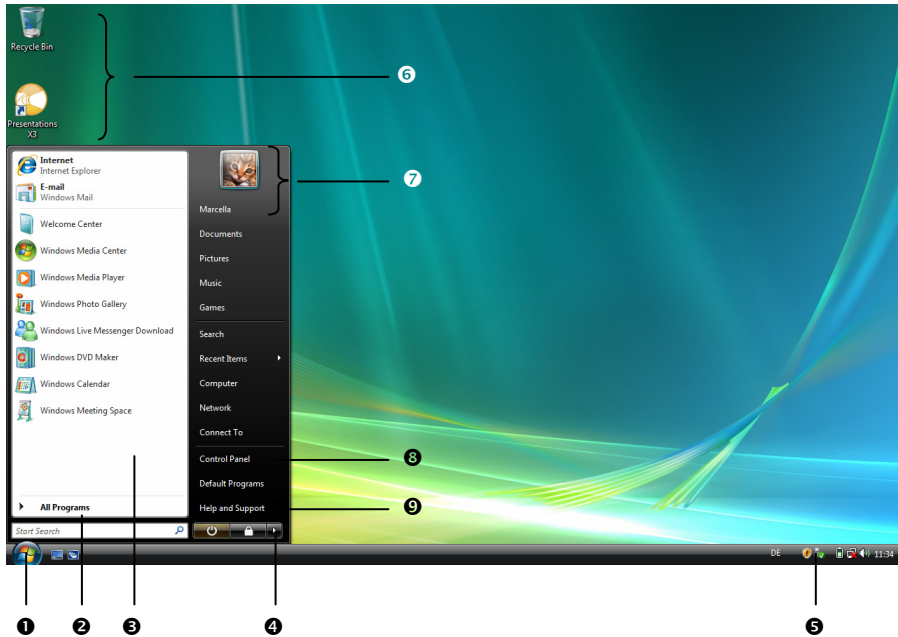

Please read through the license agreement carefully. It contains important legal information on the use of your software. In order to see the full text, use the mouse and the scroll bar to move downwards until you have reached the end of the document. You accept the agreement by clicking on the **I accept the agreement** option field. Only by doing so will you be entitled to use the product under lawful terms and conditions.

## Step 3: Finalising

After the login procedure the Windows® desktop appears on your screen.

This can be adjusted so that the screen of your computer looks different. The basic operation, however, is ensured.

### Short Description of the Windows® Desktop

#### 1. Start Button

Clicking the Start button brings up a menu where you can access help, software programs, files, and settings.

#### 2. All Programs

All of the software programs installed on your PC are ordinarily listed here. Click **All Programs** to reveal an extensive menu.

#### 3. Program Bar

The most commonly used software programs are listed here.

#### **4. Turn Off Computer**

Click on this interface with the left mouse button and select the **Shut Down** option, in order to switch the PC off.

#### **5. Task Bar**

Here you receive information and status reports about Windows Vista® and which programs are running.

#### **6. Desktop Icons**

Desktop icons link to their respective programs. To start a program, double-click its desktop icon.

#### **7. Logged in User**

This tells you which user is logged in to your PC.

#### **8. Control Panel**

You can use the icons in Control Panel to change the appearance and functionality of Windows® Vista®. These icons represent options for configuring your PC.

#### **9. Windows® Vista® Help**

Here you can find information on using your PC, networking, backup, and many other tasks.

# Chapter 3

---

## Operation

Subject	Page
The Mouse.....	29
The Keyboard .....	30
The Hard Drive.....	31
The Optical Drive.....	34
The Card Reader .....	38
The Graphics Card .....	39
The Sound Card.....	42
IEEE 1394 (Fire Wire) .....	43
The USB Port.....	44
Network .....	45
The TV Tuner Card.....	47
The Remote Control .....	48
Serial COM Port .....	52
Software .....	53

# The Mouse

Connection possibility: J

In between the two buttons on the mouse, there is a scroll wheel.

## Note

The scroll wheel can be used as a button. The functionality depends on the application. In Word, for example, it is to use the mouse moves up and down as scroll function.

If the mouse cursor moves jerkily on the screen, try a different surface (mouse pad). Glass and metallic surfaces might cause problems.

## Battery save function

If you do not use your optical wireless mouse for a few minutes, the battery save function turns on. In this case you cannot move the cursor on your screen. In order to reactivate the mouse, click any key on your mouse.

# The Keyboard

Connection possibility: **J**

This section contains useful information on using the keyboard. All diagrams are **schematic**.

On the base of the keyboard are two folding feet that let you adjust the angle of the keyboard. Pull them forward to adjust the angle of the inclination.

**Note**

Only one of the three LED on the keyboard has a function. The LED in the middle lights when the battery of the keyboard is empty.

## The Alt and Ctrl Keys

The left **Alt** key performs certain functions in conjunction with other keys. The application program determines these functions. In order to enter a combination of keys that include the **Alt** key, hold the **Alt** key down while pressing the other key. The right **Alt** key operates in a similar way but selects certain special characters. The **Ctrl** key, like the **Alt** key, carries out program functions.

Useful key combinations (software-dependent):

Key Combination	Function and Description
Alt + F4	As a rule ends the program selected or closes the window opened.
Alt + Print screen	Copies the image of the window currently active to the clipboard.
Shift + '	Generates the @ character required for e-mails (pronounced: at).
Ctrl + Alt + Del	Windows security is launched.

(Country-specific variances are possible.)

## Multimedia functions

Some keyboards are provided with multimedia keys. These keys have the following functions:

Symbol	Function
	<b>Internet</b> - use this key to start the standard internet browser
	<b>E-Mail</b> - use this key to start the standard e-mail program.
	<b>Previous Track</b> - Use this key to skip backwards to the previous track/title.
	<b>Play / Pause</b> - starts the audio and/or video playback. If you press this key for a second time, you activate the pause function.
	<b>Stop</b> - Use this key to end playback of the current track/title.
	<b>Next Track</b> - Use this key to skip forward to the next track/title.
	<b>Quieter</b> - lowers the volume.
	<b>Louder</b> - increases the volume.
	<b>Mute</b> - use this key to mute (on/off) the sound output.
	<b>Back</b> - switches to the previous web page.
	<b>Forward</b> - as soon as you press the Back key at least once, you can page forwards.
	<b>Windows Flip 3D</b> - use this key to flip through the open windows.
	<b>Gadgets</b> - use this key to call on top of desktop the gadgets (mini applications) of the sidebar
	<b>MCE</b> - use this key to start the Media Center.

# The Hard Drive

The hard drive is the main storage medium combining large storage capacity and rapid data access.

The hard drive contains the operating system of the computer, other application programs and backup files. These programs and files are pre-installed on your PC, so you may note that some of the space on your hard drive is already taken.

The Windows operating system cannot use the full capacity of the hard drive, which means that there will be a difference between the capacity that the BIOS displays and what the operating system displays. The operating system of the PC, further application programs and backup files are located on the hard drive and reduce its total capacity.

The hard drive is addressed as drive **C** and **D**.

## Note

Never switch off the computer while the busy indicator is lit since this may result in loss of data.

Usually your hard disk is divided into more partitions, but there can also be some minor variations.

In your first partition (**Boot**) you will find your **operating system, application programs** and the **users' documents and settings**.

The second partition (**Recover**) serves for data security and contains additional drivers and tools.

The backup files are also found here (**D:\Recover**). They allow you to reset your computer to its original factory-set configuration. (Please see page 70.)

## Important Directories

In the following we have listed the most important directories and described their content.

### Attention!

Do not delete or modify these directories or their contents since data could be lost or the functionality of the system could be at risk.

**C:\** The master directory of drive C: includes important files required to start Windows. In the factory setting these files are hidden for safety reasons.

### **C:\Programs**

As the name suggests, in this directory programs install the files belonging to the application.

### **C:\Windows**

The main directory of Windows.

This is where the files of the operating system are saved.

### **D:\Driver**

This folder includes the drivers required by your computer (pre-installed).

### **D:\Tools**

Here you find additional programs and other documentation for your PC.

### **D:\Recover**

Here the backup files are located enabling you to recover the factory setting (see page 64).

## Connecting an external hard drive

Your PC has a hard disk bay, which will enable you to connect the external **MEDION HDDrive 2go ultra speed**<sup>\*</sup> hard drive simply and without complications via the S-ATA connector.

As in the case of a USB memory pen, connection takes place with a restarted operating system. The hard drive will be recognized as a replacement storage medium and will be allocated a drive letter automatically.

### Note

Please take note of the fact that **only** the **MEDION Hard Drive** specified above can be connected to the hard disk bay.

The **HDDrive 2go** (connection via USB) of the first generation can only be connected with a **special** adapter.

As soon as you attach the hard disk to the hard disk bay, this is recognized as the removable data carrier of your PC. If you don't access your **MEDION HDDrive 2go ultra speed** for a long period of time (approximately 10 minutes), it goes into the energy savings mode, in order to not bring about the unnecessary consumption of electricity.

### Important!

The plugs are provided with **dust protection caps** to protect the connections. They must be removed before use. The caps must be replaced under all circumstances, if the connections are not used.

---

<sup>\*</sup> The **MEDION HDDrive 2go ultra speed** is not included with this PC. Kindly contact the MEDION Help Desk at 1 300 884 987 for information about purchasing this product.

# The Optical Drive

Diagram reference: **C1, C2**

## Loading a Disc:

### Attention!

Do not place protective foils or other stickers on your CD's. To avoid damage to your drive, do not use deformed or damaged CD's. Attention: Do not use scratched or dirty discs, discs with pieces broken off or discs of poor quality. Because of the high speeds in the drive the discs might break and damage your data as well as your drive. Examine the discs before you enter them. If damage or dirt is visible, you should not use them.

Damage caused by faulty media is excluded from warranty and any repair will be charged.

1. Pull the eject button (Diagram reference, **C2**) on the right of the optical drive to open the tray.
2. Place the disc on the tray so that it lays flat with the label facing upward.
3. Pull the eject button again to close the tray.

### Note

Many CD's start automatically when they are inserted. This depends on the operating system and the corresponding settings.

## Playing Back and Retrieving Data from Discs

Your PC is able to playback and retrieve Audio CDs, DVD Movies and Data discs.

After loading the disc your operating system will open a selection window with different options for playback.

If your operating system doesn't open the selection window you still have the possibility of the access via the  **Explorer** or  **Computer**.

## How to Remove a Disc

1. Pull the eject button (Diagram reference, **C2**) at the front of the CD-ROM drive to open the drawer.
2. Remove the disc and store it in the CD cover in a safe place.

### Note

Do not try to remove the CD from the drive while the computer is accessing the disk.

## The Optical Drive as Boot Drive

The optical drives can be used for booting the operating system. If the PC does not boot, it is possible that **autostart** is turned off in the BIOS or the CD is not bootable.

## Regional Playback Information for DVD

The playback of DVD movies includes the decoding of MPEG2 videos, digital AC3 audio data and the deciphering of CSS protected contents.

CSS (sometimes called copy guard) is the name of a data protection program incorporated by the movie industry as an action against illegal copies.

Among the numerous regulations for CSS licensees the most important ones are the country specific playback restrictions.

In order to facilitate the geographically restricted release of movies, DVD titles are released for certain regions.

Copyright laws require the restriction of each DVD movie to a certain region (usually the region, in which it is sold).

DVD movie versions can be published in several regions but the CSS regulations require that each CSS decipherable system may only be used in one region.

### Attention!

The decoding software included with your PC may be changed for regional DVD decoding **up to five times**, after which the drive will only play DVD movies for the region setting last entered. Changing the region code after that will require factory resetting which is **not** covered by warranty. If resetting is desired, shipping and resetting costs will be billed to the user.

## Subjects Concerning the CD/DVD-Rewriter

Normal Discs are pressed from a digital, glass master and then sealed. In the case of blank disc, the information is burnt onto the disc with the laser of the Rewriter. Therefore these discs are more sensitive than normal CDs.

Please avoid the following when using recordable/rewriteable discs - especially blanks - that have never before been used:

- radiation by direct sunlight (UVA/UVB)
- scratches and damage to the disk surface
- extreme temperatures

## Important Information about High Resolution Video Formats

Your system is supplied with a HD /Blu-ray drive.

This concerns technologies that support two different high resolution video formats.

You will still be able to play the following media with your drive:

- Audio CDs
- CD-R
- CD-RW
- DVD+R / DVD-R
- DVD+RW / DVD-R

Among other factors, the following requirements must be fulfilled, in order to be able to play the new video formats or new media (HD-DVD and Blu-ray disks):

- The contents of a HD-DVD or a Blu-ray disk can only be played with the **Power DVD** software supplied with the device and **Media Center**.

### Note

Media Center and Windows Media Player do not support any high resolution video formats.

- The playback software must be updated regularly by means of the internet, so that the reproduction of the newest title will be guaranteed at any time. The intervals between the updates will be pre-determined by the software if no internet connection is present.
- The connections (DVI or HDMI) must support the **HDCP** standard, if the device is connected to a digital source of output (e. g. a TFT monitor or an LCD TV). Take this information from the operating information of your output device.

# The Card Reader

Diagram reference: **Q**

If your PC is equipped with a card reader, you can handle different memory card types. The following table refers to the use of the card reader:

Slot	Card type	Contacts
MS SD MC	Memory Stick Memory Stick Pro SD (Secure Digital) MMC (MultiMediaCard)	pointing downwards
CF	CF (Compact Flash) IBM® Microdrive	point to front
SM/XD	SmartMedia XD	point to bottom pointing upwards

If a card is inserted, a free drive will be assigned\* by Windows®.

\* Only if this concerns a removable disk.

# The Graphics Card

Diagram reference: **N**

Your computer is fitted with a high performance graphics card, one of the most technologically advanced and best-equipped VGA cards available.

## Performance Characteristics

- High Performance Acceleration
- Interactive Direct3D Acceleration
- Support of DirectX 10
- Video Acceleration for DirectDraw/DirectVideo, MPEG-1, MPEG-2, DVD and Indeo® Video Technology
- ACPI Power Management

## Current Image Playback Frequencies

The graphic card can, depending on the set resolution, display vertical image playback frequencies of between 60 Hz and 240 Hz.

Resolution	Colors	Resolution	Colors
640 x 480	8-, 16-, 32bit	1600 x 900	8-, 16-, 32bit
800 x 600	8-, 16-, 32bit	1600 x 1200	8-, 16-, 32bit
1024 x 768	8-, 16-, 32bit	1920 x 1080	8-, 16-, 32bit
1152 x 864	8-, 16-, 32bit	1920 x 1200	8-, 16-, 32bit
1280 x 960	8-, 16-, 32bit	1920 x 1440	8-, 16-, 32bit
1280 x 1024	8-, 16-, 32bit	2048 x 1536	8-, 16-, 32bit

You can change the graphics setting using the **Personalization** help program in the **Control Panel**. The graphics driver will ensure that it will not be possible to set any resolution unsuitable for the graphics system at the same time. It is recommended that vertical scanning rates for tubed devices (CRT) are 75 -85 Hz and 60-75 Hz for LCD monitors. Read the Operating Instructions of your monitor as well.

## Connecting the PC to a Television

Diagram reference: **N, M1, M2, M3**

The **Video outputs** (TV-out) are located on the **back** of your PC. They offer comprehensive possibilities for transferring images on the PC to a television.

### Note

You will need an S-video cable for connecting your device to the PC according to the equipment. This is **not** included in the scope of the delivery, but it can be obtained through a specialist shop.

Read precisely which cable you need in the Operating Instruction of your TV device.

## How to Connect the PC to a Television:

### Note

To use the TV function you **must first connect** the TV to the graphics card **before** starting up the PC!

1. Shut down Windows and power off the PC.
2. Connect the composite, SCART, S-video or component input on your device to the corresponding output (diagram reference: **M1, M2, M3**) on your PC. Alternatively, if your television set has an appropriate port, you can use the digital HDMI connection (High Definition Multimedia Interface) (**N**) for the transmission of picture and sound signals.
3. Switch on the television to see the PC image on your TV set.
4. Start up the PC and wait for Windows to fully load.
5. In the **Personalization** program set up the configuration.
6. End configuration by clicking on **OK**.

### Note

The video **outputs** at the **back** of your PC are only planned for **playback**. For **video recording** please use the Video Input (composite or S-Video) connectors at the **front** of your PC.

# The Sound Card

Diagram reference: **E, F1, F2, G1, G2, R, S**

## Note

The speaker outputs **E, F1** and **F2** are designed for active speaker systems. Passive speakers cannot be used or if they are the quality will be significantly reduced.

By using the external connections you have the possibility to connect your PC with a surround system.

If you wish to alter the base volume, click on the loudspeaker symbol in the task bar.

Click on **Mixer**, in order to open the volume mixer.

## Note

Only connect the headphones/earphones to the front connector of your PC (diagram reference: **R**).

## Caution!

The use of headphones/earphones with a high volume can lead to lasting damage to your hearing. Set the volume to the lowest level before reproducing any sound. Start the sound reproduction and increase the volume to the level that is comfortable for you. Changing the basic settings of the equalizer can also cause damage to the hearing of the listener.

It can cause damage to the hearing ability of the listener if a device is operated through earphones with an increased volume for a long period.

# IEEE 1394 (Fire Wire)

Diagram reference: I

The IEEE 1394 connector, also known as iLink<sup>®</sup> or Fire Wire, is a serial bus standard used for rapid digital data exchange.

## Application Options for IEEE1394

- Connection of digital devices of the entertainment industry, such as set-top speakers, digital video and camcorder, 'Digital Versatile Disk' (DVD), television etc.
- Multimedia applications and video processing.
- Input and output devices such as printers, scanners, etc.

## Technical Specifications

- Depending on the application, the maximum data transfer is about 100, 200 or 400 Mbit/s, corresponding to a data throughput of up to 50 MB per second.
- The device can be plugged in or unplugged during operation (hot plugging).
- The standardised cord ('Shielded Twisted Pairs' –STP) includes 6 strands. Two lines are live (8V up to 40V, 1.5 A max.) and can be used as an external power supply. The four signal lines transfer data or control information. Some devices do not require a power supply via the cord so that four pole plugs are used.
- The voltage output of the 6-pole IEEE 1394 jack is protected by a fuse (limited power source according to EN60950).

### Note

The IEEE 1394 ports located **at the front** of your PC can only be used separately. A simultaneous use is not possible.

# USB Port

Diagram reference: J

## Note

Devices connected directly to the USB bus should not draw more than 500 mA.

The voltage output is protected by a fuse (Limited Power Source according to EN 60950).

Should the devices need more power than this, it will be necessary to provide a hub (distributor / booster).

On the USB it is possible to connect up to 127 devices which correspond to the USB standard (1.1 and 2.0 supported).

The data transfer speed is 1.5 Mbit/s or 12 Mbit/s, depending on the device connected. USB 2.0 can reach up to 480 Mbit/s.

## Note

If possible, connect your USB devices always to the same port where it has been installed. Otherwise you will get a new ID and your operating system asks for a new installation of the driver.

# The Network

Diagram reference: **H**

Your PC is provided with a Fast Ethernet-Network connector

You will find further information about networking in the **Help** section within the **Start** menu.

## What is a Network?

A network means connecting your PC to another or several other PCs. Users can transfer information and data between computers and share resources such as printers, modems and hard disk drives.

Here are some practical examples:

- You can exchange Email and manage appointments in an office.
- Users can share a printer in a network and save their data on a central server.
- Share one modem or one ISDN card among computers for Internet access.
- Two or more PCs can be connected to play network games or share data.

## Troubleshooting within the Network

-  Why does the network environment not show the releases?
  -  The network environment is delayed in time. Check the release by searching for the respective **computer name**.
-  Why does an error message appear when I click on the network environment?
  -  The **computer name** must be unique on the network and may not be the same as the **task group**.
-  It appears that the network boards are unable to communicate. What might be the problem?
  -  Maybe one of the used network boards works with a **different speed** (e. g. 10 instead 100 Mbit) and your network computer is unable to recognize this. If necessary, set the network driver to the compatible speed.
  -  If two PCs should be linked you require a **cross-link cable**, otherwise use a **patch** cable.
  -  In addition, check the **protocols** and the **configuration**.
-  The data transmission is incorrect or very slow. What might be the problem?
  -  Maybe you have the wrong cable (UTP / CAT3 or lower) or the problem is the proximity of a power cord or another source of interference.

For further hints on troubleshooting refer to the Windows help under “**Network errors**”.

# The TV Tuner Card

Diagram reference: **0**

## Watch TV

With Windows Vista® we supply optimal software for digital television, digital photography and digital music.

### **Attention!**

Audio or video recordings need a great deal of memory (between 1 and 2 GB/hour). Safeguard files that you do not need on external media, such as DVD/CD-Rs or hard drives.

# The Remote Control

This wireless remote control set can only be used to control the **Media Center** program on your PC. In order for it to work, the following conditions must be met:

- The PC must be booted up.
- Windows\* must be fully loaded.
- The driver software must be installed\*.
- Receiver connected to a USB port\*.

## Inserting Batteries

1. Open the battery compartment carefully.
2. Insert two batteries (type: Micro, LR03/AAA, 1,5V) in the battery compartment. Ensure that the polarity corresponds to the illustration etched on the inside of the battery compartment (+ must correspond with + and – with –).
3. Close the battery compartment again.

### **Attention!**

There will be a danger of explosion if the battery is replaced incorrectly. Only replace it with the same type or an equivalent type of battery.

---

\* All these conditions are met in the delivered state.

## Button layout

### Note

The functions described here are standard functions.  
These Buttons can differ according to the operating mode (TV, video, photo, etc.).

		On / Off
		Start video text application.
		Special function Button red (e.g.: for video text)
		Special function Button yellow (e.g.: for video text)
		Special function Button blue (e.g.: for video text)
		Special function Button green (e.g.: for video text)
		TV records
		DVD menu
		EPG function (Electronic Program Guide)
		Live TV – starts the main screen television mode
		Reverts to the point selected previously.
		Application-related information function.
		Audio strength control for the audio playback. Press + to increase the volume. Press - to lower the volume.
		Mute Switch (switches the sound output off).
		Press + to select the next channel. You select the previous channel with -.

		With these navigation keys, you can navigate between selection and menu elements.
		Starts Media Center.
		Previous title/images/chapter
		Next title/images/chapter
		Rewind
		Starts playback.
		Fast forward
		Start recording
		Ends the playback/recording
		Pauses the playback at the selected point.
	Direct selection of the TV channels by means of numbers. Number entry in the case of some functions (video text, etc.). Text entry with some functions.	

## Changing the transmission/reception channels

If several computers with remote controls are set up in close proximity of each other (approx. 10 metres), this can lead to interference. This can be remedied by choosing different channels. **Only reset the remote control in case of interference.** Proceed as follows:

1. Start the **Control Panel**.
2. Choose the menu item **Wireless Remote Settings**.
3. Select the option "**Use Wireless Remote Settings with the remote set to this channel**".
4. Select the new channel (a number between 1 and 16) in and confirm your setting with the **Apply** button.
5. Press and hold the **green Media Center** button until the LED starts flashing.
6. Release the button, the LED stops blinking and the light is on.
7. Now enter the new channel for the remote and confirm with the **green Media Center** button.
8. Press any button on your remote to see the current code.
9. Confirm your settings by using the OK button of the Wireless Remote Settings window.

# Serial COM Port

Diagram reference: **K**

The 9-pin serial interface is used as the port for serial devices such as modems, card readers or mice. The interfaces are addressed as **COM1** or **COM2** and are FIFO 16550-compatible. To use these ports it is necessary, as standard, to have a so-called **null-modem cable** which is usually supplied with the device to be connected.

# Software

This section deals with software, differentiating between **BIOS**, **application programs** and **operating systems**.

## Getting to Know Windows Vista®

Windows Vista® offers different options to understand its operation, we will mention only a few of those options here:

### Windows Vista® – Quick Start Guide:

This Handbook will give you a brief overview of the operation of your operating system.

The following themes are dealt with in it:

- Initial steps
- The Welcome Center
- Innovations
- Help displays

We recommend this reading matter to beginners and those switching from other versions of Windows.

### Windows Vista® – Help and Support

An answer to almost every question can be found in this program.

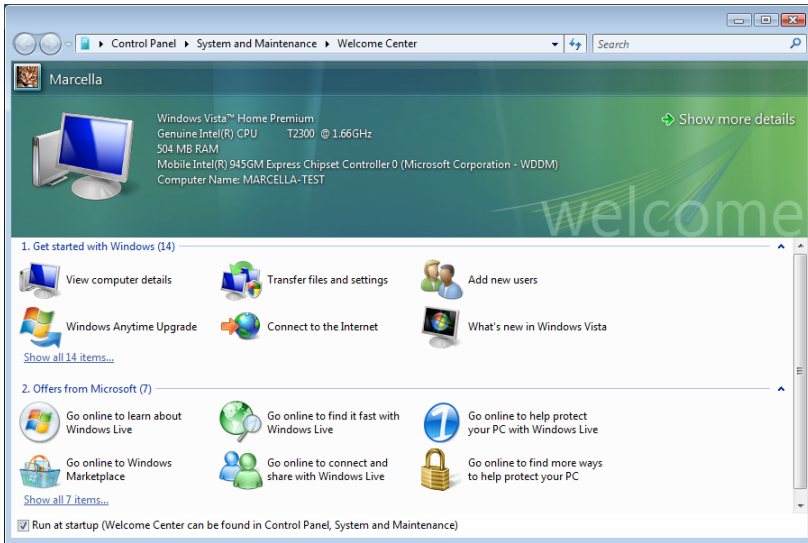

This help function fully covers the Windows operating system.

It is helpful for both beginners and professionals. You can print or bookmark the information, which is categorized into topics. You start like this:

1. Click on **Start** 
2. Now select **Help and Support** 

## Windows Vista® – Welcome Center:

You will see the Welcome Center at the first display of the Windows Vista® Desktop. This contains useful links that will make it easier for you to start using Windows.

It is the aim of this feature to enable both beginners and experienced users to make additional setting for the optimal use of Windows Vista® after first bringing the PC into operation.

The Welcome Center has been subdivided into many small groups of subjects, so that the user will have the possibility of adjusting the content optimally to his or her knowledge. There are some of the links in the following:

- View computer details  
(Find information about you computer, the type of your graphics card and the Windows Vista® version here)
- Transfer files and settings  
(Transfer data and settings off your old PC with this)
- Add new users  
(Administer and open user accounts for each user of the PC with this)
- Windows Anytime Upgrade (WAU)  
(Carry out upgrades to higher versions of Windows Vista®, in order to be able to use the expanded digital features, through this)
- Connect to the Internet  
(Configure your internet access with this)
- What's new in Windows Vista®  
(Learn how Windows Vista® is different in comparison to older versions)

- The use of the email program
- ...and much more!

Use the Welcome Center to understand your PC better and in order to be able to use it optimally. It will also serve you as an additional source of information for recognizing and removing potential problems.

You will call up the Welcome Center as follows, if you closed it after the start:

1. Click on **Start** 
2. Select **Welcome Center**  in the program list.

## Windows Vista® – User Account Control:

The User account control contributes to the prevention of unauthorized changes to the PC. A window with the message that '**If you started this action, continue.**' will appear as soon as you carry out an unauthorized change.

- Click on Continue, in order to continue the procedure.
- Click on Cancel, in order to end the procedure.

## Installation of Software

### Note

If your operating system is configured that the installation procedure accepts only signed drivers (default) and software an information screen will appear.

The software included in delivery is **already pre-installed** in the factory.

### Attention!

It happens that during installation procedure important files can be changed or even cancelled. To avoid eventual problems in using older files after installation, make sure to safeguard your hard disk. See page 63 for further information regarding data backup.

## How to Install your Software

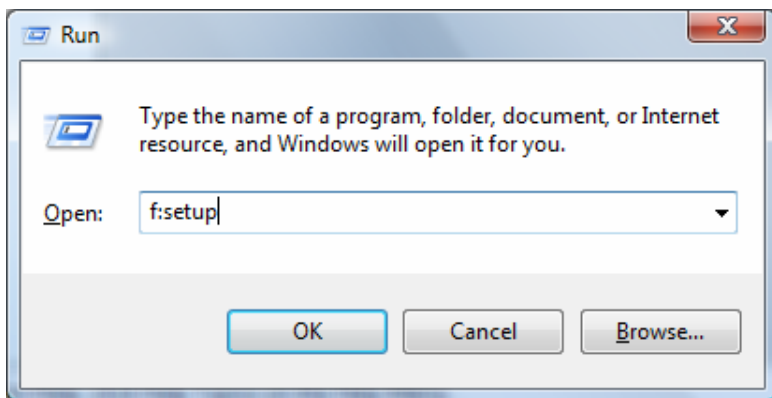

Please follow the instruction of the software vendor. We will describe a typical installation. Once you insert a CD, the installation menu is started automatically.

### Note

If the automatic start does not work, it is likely that the so-called **Autorun** function has been deactivated. Read the respective chapter in Windows Help on how to activate this function.

An example for the manual installation **without** the autorun function:

1. Click on **Start** 
2. Click on ► **All Programs**.
3. Open the **Accessories**  program point.
4. Select the item  **Run**.
5. Now enter the letter of the CD-ROM drive followed by a colon and the program name setup:

6. Click on **“OK”**.
7. Follow the instruction given by the program.

## Software Uninstallation

In order to remove installed software from your PC, follow the next steps:

1. Click on **Start** .
2. Click on  **Control Panel**.
3. Then select the **Programs**  option.
4. Select the respective program, start the uninstallation and follow the instructions on the screen.

## Windows Activation

Microsoft is committed to the protection of intellectual property rights and the reduction of software piracy. Therefore Windows Vista® contains software-based product activation technology. Your copy of Windows Vista® has already been **activated for your PC**.

Product activation is needed if some components of your PC have been replaced or you use a non-authorized BIOS. If necessary you can activate Windows Vista® as often as requested.

You will probably need to activate Windows Vista® by telephone even if Internet Activation is available. This is due to the pre-activated SLP version which runs with a special Product-ID. However, activation needs your unique Product ID which can be found on the **Certificate of Authenticity** sticker on your PC housing. When you call, please inform the agent that you are running an OEM-(SLP) version of the software.

## Product Activation on your PC

In a few cases it may still be required to activate Windows Vista®. If an activation via the **internet** is acknowledged with an error message you should perform the following steps.

1. Please select the **telephone activation** and click until the related screen appears.
2. Now click on **Change Product Key**. A new window appears. Enter the product key. This is located on the **Certificated of Authenticity (COA)**, on the computer's casing.
3. Acknowledge your entry and follow the instructions on the screen. Notify your Microsoft consultant, if necessary, that you have an OEM license.

## BIOS Setup

In the BIOS set up (your PC's Basic Configuration) you have a number of parameter settings available for your PC. For example, you can change the operating mode of the interfaces, security features or power management.

The PC is factory pre-set to guarantee optimum operation. Please only modify the parameters if this is absolutely essential and if you are familiar with the configuration possibilities.

## Execution of the BIOS Setup

You can only execute the configuration program when starting the system. If the PC has already been started exit Windows® and reboot. Prior to rebooting the PC press the key **"DEL"** and keep it pressed until the message **"Entering Setup"** appears.

## BullGuard Internet Security

The BullGuard Internet Security Package is a combination of the currently most up-to-date PC security technologies on the market and thus offers you 24-hour optimum protection.

BullGuard is already installed, so that additional installation will not be necessary. If you nevertheless have to carry out an installation (e.g. after system restoration), you will find the software package on the application/support disc supplied with the machine.

BullGuard Internet Security consists of the following security components:

- **Antivirus**  
The centrepiece of any serious PC security application, the Antivirus application screens your e-mails, and scans your hard drives for viruses and malware. The BullGuard Antivirus combines the highest update frequency in the business with a no-nonsense user-interface.
- **Antispyware\***  
BullGuard Antispyware protects your PC from all known kinds of spyware and adware by searching and cleaning files, registry keys, processes and cookies, protecting you from identity theft and the loss of personal information.
- **Spamfilter\***  
The BullGuard Spamfilter will protect you from annoying spam and potentially costly phishing attempts - a key tool in keeping your Inbox free from unsolicited mail.
- **Backup\***  
Backing up your files has never been easier with both local and online backup. Not only can you customise the size of your online backup drive to suit your needs - once uploaded, you can access these files from any computer connected to the internet anywhere in the world!
- **Support\***  
BullGuard Support is a key component in all BullGuard products. Assistance with all security related questions available to all users directly from the application. No FAQ, no automated response – real people and live help.

### \* Information

The **Antispyware**, **Spam filter**, **Backup** and **Support** components will only be released at the free registration and will be deactivated after the expiry of 90 days.

Procure a BullGuard subscription through the internet link given below, in order to be able to continue to use this module.

The BullGuard Internet Security Package will be updated with the most up-to-date virus information for 90 days after the **free registration**.

The registration window will only appear after your notebook has been restarted. You will register by entering your email address.

**Note**

Keep your password at a secure place.

The antivirus software will continue to run after the expiry of 90 days, but it will no longer be updated, so that your notebook will not be protected against new viruses.

The purchase of various subscriptions through BullGuard is possible in order to always receive the most up-to-date information and updates.

A subscription will be purchased on the internet and carried out without complications. An additional release or the entering of a licence is not necessary. Neither changes nor additional settings will have to be made.

The release will take place automatically after the purchase of a subscription.

Read the information about this on the internet at:

[https://www.bullguard.com/buy\\_new.aspx?](https://www.bullguard.com/buy_new.aspx?)

Cleaning and Care .....	72
Recycling and Disposal .....	73
Upgrades and Repairs .....	75

# Data and System Security

The programs described below are part of your Windows operating system. You will have additional information on these programs in the Windows Help file.

Please also read the notes on page 4.

## Data Security

Back up data regularly on external media such as a CD-R or CD-RW. Windows offers **Backup Status and Configuration**.

This program is found in **Accessories** ⇒ **System Tools** within the Start menu. You should make a backup disk with all your passwords and the operating system's original configuration.

## Maintenance Programs

You can avoid some hardware and software errors with the help programs such as **Disk Defragmenter** and **Disk Cleanup**. The help program **System Information** can also be helpful since it gives you detailed information about your system configuration. You will find these programs in **Accessories** ⇒ **System Tools** too.

## Password Reset File

To protect individual user accounts from complications resulting from lost passwords, users should create a password reset disk and keep it in a safe place. If the user should forget his/her password, the password can be reset with the password reset disk so that the user has access again to his/her local user account.

Windows Help describes how to create a password reset file.

# System Restore

Windows Vista® provides a useful function (**System Restore**) enabling the storage of the so-called **Recovery points**.

The system remembers the current configuration as a snapshot and returns to this, if necessary. The advantage is that an unsuccessful installation can be cancelled.

**Recovery points** are created automatically by the system, but they can also be set manually.

You can determine and configure yourself the maximum memory taken up by this. You find this program in the program file under **Accessories** ⇒ **System Tools**.

We recommend setting a **recovery point** before installing a new software or driver. If the system does not run stable any longer this enables you usually to return to a workable configuration without deleting newly created documents. In the next paragraph read your options for a repair of an incorrect installation.

## Correction

Windows Vista® includes various functions ensuring that the PC as well as the installed applications and devices work correctly.

These functions assist you in solving the problems which might occur by adding, deleting or replacing files required for the functionality of the operating system, the applications and devices. The recovery function or functions you use depend on the type of occurring problem or error. For detailed information refer to the Windows help.

## Windows® Update

**Windows Update** is the online updating of Windows. Use Windows Update to download elements such as security updates, important updates, the newest help files, drivers and Internet products from the Internet.

The website is regularly augmented by new content, so that you can download the newest updates and error corrections at any time, to protect the PC and guarantee its functioning.

Windows Update will search through the PC and provide a list of individual updates especially for the configuration of your PC.

Each update that Microsoft regards as important for the operation of the operating system, programs or hardware components will be classified as an “important update” and automatically selected for installation for you.

Important updates will be provided to remove known problems and to protect the PC against known security risks.

Carry out four simple steps, to download the updates needed and to keep your computer on the current status of technology:

1. Click on **Start** .
2. Click on ► **All Programs**.
3. Open **Windows Update** .
4. Click on **Check for update**.
5. Click on **Add** to select the desired update and to add it to the updates to be installed, while you are searching through the available updates in each category. You can also read a complete description of each individual element by clicking on the **Read further** Link.
6. Click on **Check and install updates**, when you have selected all the desired updates, and then click on **Install now**.

## Windows Update Information for Data Security

Windows Update needs certain information about the respective PC, so that a suitable list with updates can be provided for you. This information will include the following:

- Version number of the operating system
- Version number of Internet Explorer
- Version numbers of additional software programs
- Plug & Play identification key of the hardware devices

Windows Update will stand up for the protection of your private data and will not record your name, address, email address or other forms of personal data. The information collected will only be used during the time that you are visiting the website. It will also not be stored.

The update can only be executed via the Internet. Ensure that you are on-line with your PC when downloading the updates.

## System Restore powered by Symantec

If your system is not functioning properly and Windows Vista® **System Restore** did not solve the problem, then you should use the Application Support Disc to restore your system.

### Limits of the Recovery

- Changes made to the original configuration (RAS, Desktop or Internet settings) and installed Software will be ignored by this Recovery and will not be reloaded.
- Driver Updates or hardware installed by you will be ignored by this Recovery.

#### **Beware!**

All data on drive C will be erased. If necessary, backup all required data on drive D. (Pay **absolute** attention to the notes on Page 4 and Page 63).

This recovery will reset your system to its condition at delivery. Printer installations or other additional software must be reinstalled.

### Carrying out a Restore

1. First, please read the entire **Restore** section of the Windows Help file.
2. Insert the Support-CD and reboot the PC.
3. Select the option **Boot from CD-ROM**.
4. Follow the on-screen instructions.

The PC restarts to its original factory settings.

# FAQ – Frequently Asked Questions

When do I have to activate Windows?

Your software has been preactivated in the factory. An activation will only be required, if ...

... several components are replaced by others.

... you install a new motherboard.

... a different BIOS version has been installed.

... you install the software to another computer.

What is the Windows activation?

Your operating instructions include a chapter about this subject.

How do I perform a data backup?

Make a backup and another backup of selected data to an external medium (CD-R), to familiarise yourself with the technique.

A backup is unsuitable if you are not able to recover the data, the medium (CD-R, CD-RW) is defective or no longer available.

Do I still have to install the enclosed CDs/DVDs?

No. Basically all programs are already preinstalled. The disks are only intended as backup copies.

When is the recovery of the factory setting recommended?

This method should be chosen as the last resort. Read chapter **“System Restore”** on page 64 concerning the alternatives possible.

Why is the boot partition missing when booting from the support/application CD?

The first partition is formatted with the file system NTFS. Compared to FAT32 this file system offers more security and a more efficient access. However, NTFS partitions can only be read from operating systems supporting this. This is not the case in the aforementioned CD.

# Customer Service

## Troubleshooting

Errors can have simple causes, but sometimes they are caused by faulty equipment. We would like to give you some ideas to solve common problems. Should these instructions not lead to success, please feel free to call us.

### Localise the Cause

Visibly check all cables and connections. Should all lights be off, check whether all equipment is supplied with power.

- Check power points, power cable and all power switches.
- Switch off the PC and check all cable connections. Check the connections to peripherals. Do not exchange cables, even though they may look similar. The polarity in those cables may be different. When it is confirmed that the computer has power and all connections are correct, turn the computer on again.

Frequent use of the programs **Disk Defragmenter** and **Disk Cleanup** will help you to avoid problems with your operating system.

The tool "**System Information**", available in the program folder "**System Tools**" is also very useful.

## Errors and Possible Causes

### **The monitor is blank.**

- Confirm that the system is not in stand-by mode. Press any key on the keyboard to test this out.

### **Wrong Date and Time:**

- Double-click the clock on the taskbar and correct the date and time.

### **After a system restart a new drive letter is assigned to the cards in the card slots.**

- This can happen, when the card reader re-initializes the slots during a system start. New IDs might be assigned, which can lead to new drive letters for some cards.

### **No data can be accessed from the optical drive.**

- Check whether the disc is inserted correctly.
- Is the optical drive displayed in Windows Explorer? If so, test another disc.

### **The mouse does not work.**

- Check the cable.
- Does your mouse work with other programs? Is your mouse activated?

### **There is not enough room on the HDD.**

- Audio or video recordings need a great deal of memory (between 1 and 2 GB/hour). Safeguard files that you do not need on external media, such as DVD/CD-Rs or hard drives.

### **The PC does not start up.**

- If all cable connections are correct, then try to reset the power supply of the PC. Set the power switch at the rear of the PC to position 0 (OFF). Now press down the main switch at the front of the PC for 10 seconds. Wait 5 more seconds and the restart the PC.

## Additional Support

If the suggestions in the above section have not solved your problem, please contact the service hotline and we will attempt to help you solve the problem. Before you contact the Technology Centre, however, please have the following information available:

- How is your computer configured?
- What additional peripherals do you use?
- What messages, if any, appear on your screen?
- What software were you using when the error occurred?
- What steps have you already undertaken to solve the problem?
- Have you upgraded or removed drivers or hardware?
- Can you manually repeat the problem?
- If you have been given a customer number previously, please quote this.

## Driver Support

This PC has been extensively tested in our laboratories with a large number of compatible devices. It fulfils all required standards and complies with the standard “Designed for Windows”, which certifies utmost compatibility.

However, often the software drivers for individual components are updated from time to time. This is a regular process provided by the manufacturer to mend possible compatibility problems that may occur with components (e.g., programs or hardware) that were not tested at the time of your PC's manufacture. Driver updates and the latest information on your product are available on the Internet.

Visit Medion on the Web at **[www.medion.com](http://www.medion.com)**

## Transporting the PC

Please observe the following guidelines when transporting the PC:

- To avoid damage during transport, store the PC in its original packaging.

## Cleaning and Care

The lifetime of the PC can be extended by taking the following measures:

### Warning!

There are **no user-serviceable** or user-cleanable parts inside the PC housing.

- Before cleaning, always remove the power plug and all connecting cables. Clean the PC with a damp, lint-free cloth. Do not use any solvents, corrosive or gaseous cleaning agents. Do not use CD-ROM cleaning disks or similar products that clean the lens of the laser to clean your CD- /DVD-drive.

## Recycling and Disposal

### Device

At the end of its life, the appliance must not be disposed of in household rubbish. Enquire about the options for environmentally-friendly disposal

### Batteries

Do not dispose of used batteries in the household rubbish! They must be deposited at a collection point for used batteries.

### Packaging

To avoid damage during transport, the PC is stored in a packaging. Packaging is produced mostly from materials which can be disposed of in an environmentally friendly manner and be professionally recycled. Please retain the packaging for the life of the PC in case the unit is required to be transported.

Should you have any questions concerning the disposal please contact your dealer or our service.

## Battery Treatment

Batteries may contain combustible materials. By misuse, this may cause battery **leakage, heat, explosion or ignition**, bringing about **injury or damage** to the device.

Please observe strictly the following matters:

- Keep children away from batteries.  
If by any chance, the batteries are swallowed, consult a doctor immediately.
- Do not charge batteries (except rechargeable batteries).
- Do not forcibly discharge batteries.
- Do not short-circuit batteries.
- Do not heat or dispose of in fire.
- Do not disassemble or deform batteries.  
Your hands and fingers may be injured, or the liquid of the battery may get into your eyes or adhere to your skin. If this happens, rinse with a large quantity of water immediately and consult a doctor.
- Do not expose batteries to strong impact by dropping or throwing the batteries.
- Do not reverse the positive (+) and negative (-) terminals to avoid short-circuit.

- Do not mix used and new or different types of batteries together. Your equipment may not operate properly. In addition, the battery exhausted first may be excessively drained (over-discharged).
- Remove promptly the used batteries from the device.
- Replace all batteries with new batteries of the same type at the same time.
- Insulate the terminal parts with tape or the like at the storage or disposal of the batteries.
- Check that the contacts in the device and on the batteries are clean and clean them if necessary, before inserting the batteries.
- Do not throw rundown batteries in the domestic refuses! Respect the environment and throw them in the specific containers for separate collection. If necessary, turn to your reseller or to our service assistance. Thank you!

## Upgrades and Repairs

- Only a qualified engineer should perform upgrades and repairs to your PC.
- If you do not have the necessary qualifications, go to an appropriate Service Engineer. Please contact our Service Centre if you are experiencing technical problems with your PC.

## Notes for Service Engineers

- Before opening the housing, disconnect the PC from all power sources and remove any connecting cables. If the PC has not been disconnected from the power outlet before being opened, there is a danger to life through electric shock. There is also a risk of damage to the components.
- Internal components of the PC may be damaged by electrostatic discharge (ESD). Carry out system upgrades and changes in an ESD-protected workshop. If no such workshop is available, wear an antistatic wrist strap or touch a highly conductive metal object. Medion can repair damage sustained by inappropriate handling for a fee.
- Use only original spare parts.

### Caution!

Lithium batteries can not handle intense pressure, high temperatures or fire. Danger of explosion if replaced incorrectly. Replace batteries with a compatible type as recommended by the manufacturer.

Lithium batteries are hazardous waste and require proper disposal. Contact the Service Centre for additional information on battery disposal.

## Notes on Laser Radiation:

- Laser devices of Laser Class 1 to Laser Class 3b may be used in the PC. Where the PC housing remains closed, the device meets the requirements of Laser Class 1.
- By opening the PC housing you will gain access to laser devices of up to Laser Class 3b.

When removing and/or opening laser devices, the following guidelines must be observed:

- The CD-ROM-/CDRW-/DVD-drives installed contain no user-serviceable parts.
- Only the manufacturer should perform repairs to the CD-ROM-/CDRW-/DVD-drives.
- Do not look into the laser beam, even while wearing optical protection.
- Do not allow yourself to be exposed to the laser beam. Avoid exposure of the eyes or skin to direct or stray radiation.

# Chapter 5

## Appendix

Subject	Page
Standards .....	79
Index .....	82

# Standards

This PC meets the requirements of the following standards:

## Electromagnetic Compatibility

This PC meets the following requirements for standards of electromagnetic compatibility and electrical safety:

<b>EN 55022</b>	Information technology equipment - Radio disturbance characteristics - Limits and methods of measurement.
<b>EN 55024</b>	Information technology equipment - Immunity characteristics - Limits and methods of measurement.
<b>EN 61000-3-2</b>	Limits - Limits for harmonic current emissions (equipment input current up to and including 16 A per phase).
<b>EN 61000-3-3</b>	Limits - Limitation of voltage fluctuations and flicker in low-voltage supply systems for equipment with a rated current up to 16 A.

The aerial connection of the TV card complies with EN55013 and EN55020.

## Electrical Safety

Electrical safety requirements according to the following standards:

<b>EN 60950-1</b>	Safety of information technology equipment.
-------------------	---

## Ergonomics

Ergonomic requirements according to the following standards:

<b>DIN EN ISO</b>	Ergonomic requirements for office work with display devices:
<b>9241-3</b>	<b>Part 3:</b> Requirements for visual displays
<b>9241-4</b>	<b>Part 4:</b> Requirements for keyboards
<b>9241-8</b>	<b>Part 8:</b> Requirements for colour representation
<b>9241-9</b>	<b>Part 9:</b> Input devices except keyboards

# Noise Emission

Requirements for noise emission according to the measurement procedure in accordance with the following standard:

<b>ISO 7779 (ISO 9296)</b>	Acoustics. Measurement of airborne noise emitted by information technology and telecommunications equipment.
--------------------------------	--

This PC fulfils the requirements of noise emissions according to ISO 7779 with following values:

<b>Operating Mode</b>	Max. Sound power level $L_{WAd}$ (B/A) (declared according to ISO 9296)
<b>Idling</b>	4.8
<b>Operating</b>	5.2
	Max. Sound pressure level $L_{pAm}$ (dB/A) (declared according to ISO 9296)
<b>At bystander position Idling</b>	40
<b>At bystander position Operating</b>	47

# FCC Compliance Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. Shielded interface cables, if any, must be used in order to comply with the emission limits.

# Making Copies of this Manual

This manual contains information protected by law. All rights reserved. Duplicating this information in mechanical, electronic, or any other form, without the written approval by the manufacturer, is prohibited by copyright law.
